DETAILED MATCH ANALYSIS

Round 14 | Docklands | 2026-06-11

Western Bulldogs vs Adelaide

MEDIUM CONFIDENCE

TIP: Western Bulldogs 53% win probability approx. 2pt margin

Western Bulldogs \$1.71 (58.5% implied) | Adelaide \$2.15 (46.6% implied) | Line: Western Bulldogs giving 5.2 pts

PREDICTED WINNER: Western Bulldogs

WIN PROBABILITY: Western Bulldogs: 53% | Adelaide: 47%

The win probability is derived from a weighted blend of betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probabilities adjusted to remove the bookmaker's overround. The Squiggle model's prediction of a 8.5-point Western Bulldogs win and the team's recent form, including a 6-point win over Hawthorn, contributed to the slightly higher probability for the Western Bulldogs.

PREDICTED MARGIN: ~2 points

The predicted margin is anchored to the line market, which gives Western Bulldogs a 5.2-point advantage, and the scoring margin averages, with Western Bulldogs having an average margin of +0.6 points in their last 5 games and Adelaide having an average margin of +19.6 points in their last 5 games. However, considering the home ground advantage and the teams' recent form, a smaller margin is predicted.

KEY FACTORS:

- Western Bulldogs' recent form, with 4 wins in their last 5 games, including a 6-point win over Hawthorn, suggests they are in good shape.
- Adelaide's average score in their last 5 games is 89.6 points for and 70.0 points against, indicating a strong attack, but their defence trend is stable, which might be a concern.
- The head-to-head record between the two teams shows that Western Bulldogs have a 40% win rate in their last 5 meetings, with an average score of 82.2 vs 82.2.

4. Western Bulldogs' home ground advantage, with a 67% win rate at home this season, and their historical record at Docklands, with a 53% win rate, could give them an edge.

SCORING TRENDS ANALYSIS:

Western Bulldogs' last-5 average is 80.6 points for and 80.0 points against, while their last-3 average is 89.0 points for and 84.7 points against. Their attack trend is improving, and their defence trend is stable. Adelaide's last-5 average is 89.6 points for and 70.0 points against, while their last-3 average is 91.3 points for and 71.3 points against. Their attack trend is stable, and their defence trend is stable. Western Bulldogs' improving attack trend gives them an advantage.

HOME GROUND ADVANTAGE:

Western Bulldogs have a 67% win rate at home this season, while Adelaide have a 40% win rate away from home. At Docklands, Western Bulldogs have a 53% win rate, while Adelaide have a 50% win rate. The point value of home advantage for this match is estimated to be around 8-10 points, considering the historical records and the current season's performance.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 58.5% chance of Western Bulldogs winning, while the line market gives them a 5.2-point advantage. The Squiggle model predicts an 8.5-point Western Bulldogs win, with a 55.6% chance of them winning. The market and model agree on Western Bulldogs being the favourite, but the predicted margin varies.

FATIGUE & TRAVEL IMPACT:

Western Bulldogs have 6 days of rest, while Adelaide have 7 days of rest. Adelaide have a short travel from Adelaide to Melbourne, which is unlikely to have a significant impact. Fatigue is not a significant factor for this match, given the relatively short rest period for both teams.

WEATHER IMPACT:

The weather forecast is neutral, as the game is played at Marvel Stadium, which has a roof. Therefore, the weather conditions will not affect the play.

TEAM NEWS IMPACT:

There is no relevant team news available for either team, so the impact is unknown.

CONFIDENCE: Medium

The data sources generally agree on Western Bulldogs being the favourite, but the predicted margin varies, which reduces the confidence level.

UPSET RISK: Medium

The upset risk is supported by Adelaide's strong attack, with an average score of 89.6 points in their last 5 games, and their stable defence trend. Additionally, Western Bulldogs' short rest period and Adelaide's relatively long rest period could contribute to an upset.

DATA CONFLICTS: None identified.

Round 14 | Kardinia Park | 2026-06-12

Geelong vs Gold Coast

MEDIUM CONFIDENCE

TIP: Geelong

73% win probability approx. 20pt margin

Geelong \$1.27 (79.0% implied) | Gold Coast \$3.85 (26.0% implied) | Line: Geelong Cats giving 24.6 pts

PREDICTED WINNER: Geelong

WIN PROBABILITY: Geelong: 73% | Gold Coast: 27%

The probability is driven by a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probability of 79% for Geelong being adjusted downward due to the team's recent inconsistent form.

PREDICTED MARGIN: ~20 points

The predicted margin is anchored to the line market of 24.6 points and adjusted downward based on Geelong's average margin of +23.4 points over the last 5 games, as well as Gold Coast's ability to score an average of 90 points per game over the same period.

KEY FACTORS:

- Geelong's significant home ground advantage, with a 100% win rate at Kardinia Park this season and an average margin of +33.8 points over the last 5 games at the venue.
- Gold Coast's poor record at Kardinia Park, with an average margin of -66.2 points over 9 games.
- Geelong's strong attack, with an average score of 100.8 points per game over the last 5 games, although their attack trend is declining.
- Gold Coast's defence trend of leaking more points, with an average of 96.7 points conceded per game over the last 3 games.

SCORING TRENDS ANALYSIS:

Geelong's last-5 average is 100.8 points for and 77.4 points against, while their last-3 average is 88.3 points for and 81.0 points against. Their attack is trending down, while their defence is stable. Gold Coast's last-5 average is 90.0 points for and 82.6 points against, while their last-3 average is 92.7 points for and 96.7 points against. Their attack is stable, while their defence is trending down. Geelong's scoring profile gives them an advantage due to their strong home ground record and ability to score heavily.

HOME GROUND ADVANTAGE:

Geelong has a 100% win rate at home and a 17% win rate away, while Gold Coast has an 86% win rate at home and a 20% win rate away. Geelong has a strong record at Kardinia Park, with a 68% win rate over 733 games. The estimated point value of home advantage for this match is around 15-20 points, based on the significant difference in win rates and margins between home and away games.

MARKET & MODEL ANALYSIS:

The h2h market implies a 79% chance of Geelong winning, while the line market implies a 24.6-point margin. The Squiggle model predicts a 30.9-point margin in favor of Geelong. The market and model agree on Geelong winning, but the model predicts a larger margin. The market's implied probability is given more weight due to its reflection of the betting public's opinion, but the Squiggle model's prediction is also considered due to its data-driven approach.

FATIGUE & TRAVEL IMPACT:

Geelong has 8 days of rest, while Gold Coast has 6 days of rest and moderate travel from Gold Coast to Geelong. Fatigue may be a minor factor for Gold Coast due to their shorter rest period and travel, but it is not expected to have a significant impact on the game.

WEATHER IMPACT:

The forecast is for fine conditions, with a maximum temperature of 19°C and a 2% chance of rain. The weather is not expected to favor one team over the other, as both teams are accustomed to playing in various conditions.

TEAM NEWS IMPACT:

There is limited team news available, with only one article mentioning a Geelong player denying injury reports. There are no confirmed ins or outs for either team, and the impact of team news is minimal.

CONFIDENCE: Medium

The confidence level is medium due to the agreement between the market and model on Geelong winning, but also due to the potential

for Gold Coast to cause an upset based on their recent form and scoring ability.

UPSET RISK: Medium

The upset risk is medium due to Gold Coast's ability to score heavily, with an average of 90 points per game over the last 5 games, and their recent win rate of 60% over the last 5 games. Additionally, Geelong's recent form has been inconsistent, with 2 losses in their last 3 games.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data all pointing to a Geelong win. However, the potential for an upset is still considered due to the unpredictability of the game.

Round 14 | MCG | 2026-06-13

Melbourne vs Essendon

MEDIUM CONFIDENCE

TIP: Melbourne

72% win probability approx. 20pt margin

Melbourne \$1.18 (84.6% implied) | Essendon \$4.89 (20.4% implied) | Line: Melbourne Demons giving 28.4 pts

PREDICTED WINNER: Melbourne

WIN PROBABILITY: Melbourne: 72% | Essendon: 28%

The win probability is derived from a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probabilities adjusted to remove the bookmaker's overround. The betting market and Squiggle model both strongly favor Melbourne, while the form data suggests a closer contest.

PREDICTED MARGIN: ~20 points

The predicted margin is anchored to the line market (Melbourne giving 28.4 points) and scoring margin averages, with Melbourne's average margin over the last 5 games being +5.4 points and Essendon's being -22.0 points. The heavy rain forecast may reduce the margin, but Melbourne's home ground advantage and stronger form suggest they will still win by a significant margin.

KEY FACTORS:

- Melbourne's home ground advantage: They have a 5/6 (83%) win rate at home this season, while Essendon has a 0/6 (0%) win rate away from home.
- Scoring trends: Melbourne's attack is trending down, but their defence is still strong, while Essendon's attack is stable but their defence is tightening.
- Head-to-head record: Melbourne has a 2/5 win rate against Essendon in their last 5 meetings, but they have a strong record at the MCG, with a 5/0 win rate in their last 5 games at the venue.
- Fatigue: Both teams have a short turnaround, but Melbourne has an extra day of rest, which may give them an edge.

SCORING TRENDS ANALYSIS:

Melbourne's last-5 average is 92.4 points for and 87.0 points against, while their last-3 average is 81.0 points for and 95.7 points against. Their attack is trending down, while their defence is leaking more. Essendon's last-5 average is 65.6 points for and 87.6 points against, while their last-3 average is 59.3 points for and 77.0 points against. Their attack is stable, while their defence is tightening. Melbourne's scoring profile gives them an advantage due to their stronger attack.

HOME GROUND ADVANTAGE:

Melbourne has a 5/6 (83%) win rate at home this season, while Essendon has a 0/6 (0%) win rate away from home. At the MCG, Melbourne has a 5/0 win rate in their last 5 games, with an average margin of +24.6 points. Essendon has a 0/5 win rate in their last 5 games at the MCG, with an average margin of -41.0 points. The home ground advantage is estimated to be worth around 15-20 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 84.6% chance of Melbourne winning, while the line market implies a 28.4-point margin. The Squiggle model predicts a 25.9-point margin in favor of Melbourne. The market and model agree on Melbourne winning, but the model predicts a slightly lower margin.

FATIGUE & TRAVEL IMPACT:

Melbourne has 5 days of rest, while Essendon has 6 days of rest. Neither team has to travel, as the game is being played at the MCG. Fatigue is not a significant factor in this match.

WEATHER IMPACT:

The forecast is for heavy rain, which may favor Essendon's more contested style of play. However, Melbourne's stronger attack and home ground advantage may still give them an edge.

TEAM NEWS IMPACT:

There is limited team news available, but Melbourne has unveiled two double debutants for the game. The impact of these debutants is uncertain.

CONFIDENCE: Medium

The data sources generally agree on Melbourne winning, but the heavy rain forecast and Essendon's stable attack introduce some uncertainty.

UPSET RISK: Low

The data points that support an upset are Essendon's stable attack and the heavy rain forecast, which may favor their style of play. However, Melbourne's home ground advantage and stronger form suggest that an upset is unlikely.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data all suggesting that Melbourne will win.

Round 14 | Perth Stadium | 2026-06-13

North Melbourne vs West Coast

MEDIUM CONFIDENCE

TIP: West Coast

52% win probability approx. 4pt margin

North Melbourne \$1.66 (60.3% implied) | West Coast \$2.25 (44.5% implied) | Line: North Melbourne Kangaroos giving 7.1 pts

PREDICTED WINNER:

West Coast

WIN PROBABILITY:

North Melbourne: 48.2% | West Coast: 51.8%

The win probability is derived from a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the

Squiggle model's prediction of a 1.9-point North Melbourne win being adjusted to favor West Coast due to their home ground advantage.

PREDICTED MARGIN:

~4 points

The predicted margin is anchored to the line market, which gives North Melbourne a 7.1-point advantage, but adjusted downward to reflect West Coast's home ground advantage and their stable scoring trend.

KEY FACTORS:

1. West Coast's home ground advantage, with a 26pp higher win rate at home, is expected to give them an edge in this match.
2. North Melbourne's declining attack trend, with an average score of 69.0 points for in their last 3 games, may struggle against West Coast's stable defense.
3. The head-to-head record between the two teams, with West Coast winning 3 of their last 5 meetings at Perth Stadium, suggests a close contest.
4. The betting market's implied win probability, with West Coast at 44.5%, is lower than their actual win probability, indicating some value in backing the home team.

SCORING TRENDS ANALYSIS:

North Melbourne's last-5 average is 78.0 points for and 126.6 points against, while their last-3 average is 69.0 points for and 131.0 points against, with their attack trending down and defense trending stable. West Coast's last-5 average is 78.6 points for and 78.8 points against, while their last-3 average is 79.3 points for and 74.7 points against, with both their attack and defense trending stable. West Coast's stable scoring profile gives them an advantage, as they have been able to maintain a consistent level of performance.

HOME GROUND ADVANTAGE:

North Melbourne has a 57% win rate at home and 20% win rate away, while West Coast has a 43% win rate at home and 17% win rate away. At Perth Stadium, North Melbourne has a 36% win rate and West Coast has a 45% win rate. The estimated point value of home advantage for this match is around 8-10 points, which could be significant in a close contest.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 60.3% chance of North Melbourne winning, while the line market implies a 7.1-point advantage for North Melbourne. The Squiggle model predicts a 1.9-point North Melbourne win, but this is adjusted to favor West Coast due to their home ground advantage. The market and model do not entirely agree, with the market favoring North Melbourne more strongly than the model.

FATIGUE & TRAVEL IMPACT:

Both teams have had 7 days of rest, and while travel may be a factor for North Melbourne, it is not expected to have a significant impact on the match.

WEATHER IMPACT:

No weather forecast is available, so it is unclear whether conditions will favor one team over the other.

TEAM NEWS IMPACT:

No team news is available for either team, so there are no confirmed ins or outs to consider.

CONFIDENCE:

Medium

The data sources do not entirely agree, with the market favoring North Melbourne and the Squiggle model predicting a close contest, but the home ground advantage and West Coast's stable scoring trend suggest that they have a good chance of winning.

UPSET RISK:

Medium

The upset risk is supported by West Coast's home ground advantage, their stable scoring trend, and the fact that they have won 3 of their last 5 meetings at Perth Stadium.

DATA CONFLICTS:

None identified

There are no clear conflicts between the data sources, although the market and model do not entirely agree on the likelihood of a North Melbourne win.

Round 14 | Adelaide Oval | 2026-06-13

Port Adelaide vs Sydney

MEDIUM CONFIDENCE

TIP: Sydney

58% win probability approx. 10pt margin

Port Adelaide \$3.12 (32.1% implied) | Sydney \$1.37 (73.1% implied) | Line: Sydney Swans giving 16.6 pts

PREDICTED WINNER: Sydney

WIN PROBABILITY: Port Adelaide: 42% | Sydney: 58%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probabilities adjusted to remove the bookmaker's overround. The betting market and Squiggle model both favour Sydney, while the form data suggests a closer contest.

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market, which implies a Sydney win by 16.6 points, but adjusted downward due to Port Adelaide's home ground advantage and the expected impact of heavy rain on the game, which tends to reduce scoring and margins.

KEY FACTORS:

- 1. Sydney's strong recent form, with an average score of 108.0 points for and 87.4 points against over the last 5 games, suggests they have a potent attack.
- 2. Port Adelaide's average margin of -11.2 points over the last 5 games indicates they have struggled to compete with top teams.
- 3. The head-to-head record between the two teams shows Port Adelaide with a 67% win rate over the last 6 meetings, but Sydney's recent form suggests they may be able to overturn this trend.
- 4. The heavy rain forecast may reduce the effectiveness of Sydney's high-marking forwards, potentially benefiting Port Adelaide.

SCORING TRENDS ANALYSIS:

Port Adelaide's last-5 average is 71.0 points for and 82.2 points against, while their last-3 average is 69.3 points for and 87.0 points against. Their attack is stable, while their defence is also stable. Sydney's last-5 average is 108.0 points for and 87.4 points against, while their last-3 average is 118.0 points for and 88.3 points against. Their attack is improving, while their defence is stable. Sydney's scoring profile gives them an advantage due to their potent attack.

HOME GROUND ADVANTAGE:

Port Adelaide has a 33% home win rate and 33% away win rate this season, while Sydney has a 100% home win rate and 60% away win rate. At Adelaide Oval, Port Adelaide has a 61% historical win rate, while Sydney has a 56% historical win rate. The point value of home advantage for this match is estimated to be around 8-10 points, based on the historical data and the fact that Port Adelaide has a significant home ground advantage.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 73.1% chance of a Sydney win, while the line market implies a 16.6-point margin in favour of Sydney. The Squiggle model predicts a Sydney win by 17.4 points. The market and model agree on a Sydney win, but the predicted margin is adjusted downward due to Port Adelaide's home ground advantage and the expected impact of heavy rain.

FATIGUE & TRAVEL IMPACT:

Port Adelaide has 7 days rest, while Sydney has 6 days rest and a short travel distance. Fatigue is not a significant factor for this match, but the short turnaround for Sydney may have a minor impact.

WEATHER IMPACT:

The forecast is for heavy rain, which may reduce the effectiveness of Sydney's high-marking forwards and favour a more contested, defensive style of play. This could benefit Port Adelaide, who have a more stable defence.

TEAM NEWS IMPACT:

Sydney will be without Tom McCartin due to concussion, which may impact their defensive structure. Port Adelaide has no significant team news.

CONFIDENCE: Medium

The data sources generally agree on a Sydney win, but the predicted margin is adjusted downward due to Port Adelaide's home ground advantage and the expected impact of heavy rain, which introduces some uncertainty.

UPSET RISK: Medium

Specific data points that support an upset include Port Adelaide's 67% win rate over the last 6 head-to-head meetings, their significant home ground advantage, and the potential impact of heavy rain on the game.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, although the predicted margin is adjusted downward due to the expected impact of heavy rain and Port Adelaide's home ground advantage.

Round 14 | Bellerive Oval | 2026-06-14

Richmond vs Brisbane Lions

MEDIUM CONFIDENCE

TIP: Brisbane Lions

76% win probability approx. 38pt margin

Richmond \$8.82 (11.3% implied) | Brisbane Lions \$1.07 (93.4% implied) | Line: Brisbane Lions giving 45.5 pts

PREDICTED WINNER: Brisbane Lions

WIN PROBABILITY: Richmond: 24% | Brisbane Lions: 76%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probabilities and the Squiggle model's prediction both strongly favouring Brisbane Lions.

PREDICTED MARGIN: ~38 points

The predicted margin is anchored to the line market's expected margin of 45.5 points and the average scoring margins of both teams, with Brisbane Lions' average margin over the last 5 games being -20.4 points and Richmond's being -31.6 points, suggesting a margin in favour of Brisbane Lions.

KEY FACTORS:

- 1. Brisbane Lions have a stronger recent form, with an average score of 89.6 points for and 110.0 points against over the last 5 games, compared to Richmond's 72.6 points for and 104.2 points against.
- 2. The head-to-head record between the two teams shows Brisbane Lions with a 4-1 win-loss record over the last 5 meetings, with an average score of 123.6 points for and 79.0 points against.
- 3. Richmond's forward stocks have been depleted by the loss of Jonty Faull, which may impact their scoring ability.
- 4. Brisbane Lions have a higher percentage of wins away from home this season, with a 57% win rate, compared to Richmond's 14% win rate away from home.

SCORING TRENDS ANALYSIS:

Richmond's last-5 average is 72.6 points for and 104.2 points against, while their last-3 average is 67.7 points for and 111.7 points against. Brisbane Lions' last-5 average is 89.6 points for and 110.0 points against, while their last-3 average is 90.7 points for and 114.7 points against. Both teams' attack and defence are trending stable. Brisbane Lions' scoring profile gives them an advantage due to their higher average score over the last 5 games.

HOME GROUND ADVANTAGE:

Richmond's home win rate this season is 20%, while Brisbane Lions' away win rate is 57%. At Bellerive Oval, Richmond has a 100% win rate over 3 games, while Brisbane Lions have a 50% win rate over 2 games. The point value of home advantage for this match is estimated to be around 8-15 points, but this may be mitigated by the fact that Richmond's home ground is actually the MCG, not Bellerive Oval.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 93.4% chance of Brisbane Lions winning, while the line market implies a 45.5-point margin in favour of Brisbane Lions. The Squiggle model predicts a 44-point margin in favour of Brisbane Lions. The market and model agree, with the Squiggle model's prediction being slightly more conservative.

FATIGUE & TRAVEL IMPACT:

Richmond has had 15 days of rest, while Brisbane Lions has had 8 days of rest. Travel may be a factor for Brisbane Lions, but the impact is likely to be minimal. Fatigue is not a significant factor for this match.

WEATHER IMPACT:

The weather forecast is unavailable, so it is unclear whether the conditions will favour one team over the other.

TEAM NEWS IMPACT:

Richmond's forward Jonty Faull is out for the season with a back injury, which may impact their scoring ability. There is no other significant team news.

CONFIDENCE: Medium

The data sources generally agree, but there is some uncertainty due to the lack of weather forecast and the potential impact of travel on Brisbane Lions.

UPSET RISK: Low

The data points that support an upset are Richmond's 100% win rate at Bellerive Oval and their recent win over Essendon, but these are outweighed by Brisbane Lions' stronger recent form and head-to-head record.

DATA CONFLICTS: None identified.

Round 14 | Docklands | 2026-06-14

St Kilda vs GWS Giants

MEDIUM CONFIDENCE

TIP: GWS Giants

58% win probability approx. 10pt margin

St Kilda \$1.8 (55.6% implied) | GWS Giants \$2.03 (49.3% implied) | Line: St Kilda Saints giving 3.4 pts

PREDICTED WINNER: GWS Giants

WIN PROBABILITY: St Kilda: 42% | GWS Giants: 58%

The betting market and form data drove the probability, with the market's implied probabilities (St Kilda: 55.6% | GWS Giants: 49.3%) adjusted downward for St Kilda due to their recent poor form (1/5 wins) and upward for GWS Giants due to their strong recent form (3/5 wins) and superior scoring statistics (avg score last 5: 104.4 pts for, 83.6 pts against).

PREDICTED MARGIN: ~10 points

The line market implies a margin of 3.4 points, but GWS Giants' superior scoring statistics and St Kilda's leaking defence trend justify a slightly higher margin, anchored to the average margin of GWS Giants' last 5 games (+20.8 pts) and St Kilda's last 5 games (-15.4 pts).

KEY FACTORS:

- GWS Giants' strong recent form, with 3 wins in their last 5 games, including a 49-point win over Melbourne and a 78-point win over Brisbane Lions.
- St Kilda's poor recent form, with only 1 win in their last 5 games, and a defence trend that is leaking more points (avg score last 3: 109.0 pts against).
- GWS Giants' superior scoring statistics, with an average score of 104.4 points for and 83.6 points against in their last 5 games.
- St Kilda's home ground advantage is significant, but GWS Giants' away record is not drastically poor, with a 1/6 win rate, which may be influenced by their strong home record (5/6 win rate).

SCORING TRENDS ANALYSIS:

St Kilda's last-5 average is 82.4 pts for and 97.8 pts against, while their last-3 average is 81.0 pts for and 109.0 pts against. Their attack is stable, but their defence is trending downward. GWS Giants' last-5 average is 104.4 pts for and 83.6 pts against, while their last-3 average is 118.7 pts for and 82.0 pts against. Their attack is trending upward, and their defence is stable. GWS Giants' scoring profile gives them an advantage due to their high-scoring attack and stable defence.

HOME GROUND ADVANTAGE:

St Kilda's home win rate is 40% (2/5), while GWS Giants' away win rate is 17% (1/6). At Docklands, St Kilda has a 55% win rate (177W-146L) and an average margin of +4.9 points, while GWS Giants has a 38% win rate (14W-23L) and an average margin of -8.2 points. The point value of home advantage for this match is estimated to be around 8-10 points, considering the historical data and the teams' current form.

MARKET & MODEL ANALYSIS:

The h2h market implies a close game, with St Kilda at \$1.8 and GWS Giants at \$2.03. The line market implies a margin of 3.4 points in favour of St Kilda. Unfortunately, the Squiggle model prediction is not available for this match. Given the market's implied probabilities and the form data, I weighted the betting market and form data more heavily, as they provide a more comprehensive view of the teams' current performance.

FATIGUE & TRAVEL IMPACT:

St Kilda has 7 days of rest, while GWS Giants has 14 days of rest, having had a bye week. GWS Giants has a short travel distance

from Sydney to Melbourne (~1h25m flight). Fatigue is not a significant factor for this match, as both teams have had sufficient rest.

WEATHER IMPACT:

The weather forecast is neutral, as the game is played at Marvel Stadium, which has a roof. The conditions will not affect the game.

TEAM NEWS IMPACT:

No relevant team news is available for either team. This lack of information means that the prediction is based solely on the available form data and statistics.

CONFIDENCE: Medium

The data sources generally agree, but the recent form of both teams and the home ground advantage introduce some uncertainty.

UPSET RISK: Medium

Specific data points that support an upset include St Kilda's home ground advantage, their recent win over Richmond, and GWS Giants' relatively poor away record. However, GWS Giants' strong recent form and superior scoring statistics suggest that they are the more likely winner.

DATA CONFLICTS: None identified.
