DETAILED MATCH ANALYSIS

Round 15 | Perth Stadium | 2026-06-18

Fremantle vs Geelong

MEDIUM CONFIDENCE

TIP: Fremantle 58% win probability approx. 10pt margin

Fremantle \$1.33 (75.0% implied) | Geelong \$3.33 (30.0% implied) | Line: Fremantle Dockers giving 18.8 pts

PREDICTED WINNER: Fremantle

WIN PROBABILITY: Fremantle: 58% | Geelong: 42%

The probability is driven by a weighted blend of the betting market (implied 75% for Fremantle), Squiggle model (54.6% for Fremantle), and form data, with the market and Squiggle model given more weight due to their consistency, but adjusted to account for the potential impact of Geelong's short rest and travel.

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market (Fremantle giving 18.8 points) and adjusted based on the teams' scoring margin averages, with Fremantle's average margin over the last 5 games being +47.4 points and Geelong's being +21.6 points, but considering Geelong's potential fatigue and travel impact.

KEY FACTORS:

- Fremantle's recent form, with 5 consecutive wins and an average score of 110.8 points for and 63.4 points against over the last 5 games.
- Geelong's short rest (6 days) and travel to Perth, which may impact their performance, as indicated by their 1/6 away win rate this season.
- Fremantle's strong home ground advantage, with a 5/5 win rate at Perth Stadium this season and an average margin of +35.0 points over the last 5 games at the venue.
- Geelong's declining attack trend, with their average score over the last 3 games being 87.7 points, which may struggle against Fremantle's stable defense.

SCORING TRENDS ANALYSIS:

Fremantle's last-5 average is 110.8 points for and 63.4 points against, with their last-3 average being 120.7 points for and 61.0 points against. Their attack is trending up, and their defense is stable. Geelong's last-5 average is 97.4 points for and 75.8 points against, with their last-3 average being 87.7 points for and 74.3 points against. Their attack is trending down, and their defense is stable. Fremantle's scoring profile gives them an advantage due to their high-scoring attack and stable defense.

HOME GROUND ADVANTAGE:

Fremantle has a 5/5 win rate at home this season, while Geelong has a 1/6 away win rate. At Perth Stadium, Fremantle has a 5/0 win rate over the last 5 games, with an average margin of +35.0 points. Geelong has a 3/1 win rate at Perth Stadium over the last 4 games, with an average margin of +10.8 points. The home ground advantage is estimated to be worth around 10-15 points, considering the significant difference in win rates and margins.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 75% chance of Fremantle winning, while the line market implies a margin of 18.8 points. The Squiggle model predicts a 7.0-point margin in favor of Fremantle. The market and model generally agree, but the model's predicted margin is lower than the market's implied margin. The model's prediction is given more weight due to its objective nature, but adjusted to account for the market's implied probability.

FATIGUE & TRAVEL IMPACT:

Fremantle has 12 days of rest, while Geelong has 6 days of rest and travels to Perth. Fatigue is a potential factor for Geelong, given their short rest and travel, which may impact their performance.

WEATHER IMPACT:

The weather forecast is unavailable, so it is unclear whether the conditions will favor one team over the other. However, Fremantle's high-scoring attack may be less affected by weather conditions compared to Geelong's.

TEAM NEWS IMPACT:

There is limited team news available, with no confirmed ins or outs for either team. The impact of team news is unclear, but it is not expected to significantly affect the outcome of the match.

CONFIDENCE: Medium

The confidence level is medium due to the agreement between the market and model, but also considering the potential impact of Geelong's fatigue and travel, as well as the uncertainty surrounding team news.

UPSET RISK: Medium

The upset risk is medium due to Geelong's potential to overcome their fatigue and travel issues, as well as their strong historical record at Perth Stadium (6/6 win rate over 12 games). Specific data points that support an upset include Geelong's average margin of +10.8 points at Perth Stadium and their ability to win away games despite their poor away record this season.

DATA CONFLICTS: None identified

There are no clear data conflicts between the different sources, with the market, model, and form data generally agreeing on Fremantle's favoritism. However, the potential impact of Geelong's fatigue and travel may introduce some uncertainty into the prediction.

Round 15 | Carrara | 2026-06-19

Gold Coast vs Hawthorn

MEDIUM CONFIDENCE

TIP: Gold Coast

52% win probability approx. 4pt margin

Gold Coast \$2.06 (48.5% implied) | Hawthorn \$1.78 (56.3% implied) | Line: Hawthorn Hawks giving 3.9 pts

PREDICTED WINNER: Gold Coast

WIN PROBABILITY: Gold Coast: 52% | Hawthorn: 48%

The probability is driven by a weighted blend of the betting market (30%), Squiggle model (25%), and form data (45%), with a slight emphasis on Gold Coast's home ground advantage and recent head-to-head performance.

PREDICTED MARGIN: ~4 points

The predicted margin is anchored to the line market, which implies a Hawthorn win by 3.9 points, but adjusted based on Gold Coast's average margin of -5.6 points over the last 5 games and their strong home record.

KEY FACTORS:

- Gold Coast's home ground advantage, with a 6/7 win rate at home this season, compared to Hawthorn's 3/6 away record.
- The head-to-head record, with Gold Coast winning 4 of the last 6 meetings, including a 109-56 win at Carrara in 2024.
- Gold Coast's stable attack trend, with an average score of 85.4 points over the last 5 games, while Hawthorn's defence trend is tightening, with an average of 83.6 points conceded over the last 5 games.
- The rest days and travel fatigue, with Gold Coast having 7 days rest and playing at home, while Hawthorn had 14 days rest but travels to Gold Coast.

SCORING TRENDS ANALYSIS:

Gold Coast's last-5 average is 85.4 points for and 91.0 points against, while their last-3 average is 80.0 points for and 107.3 points against. Their attack is stable, while their defence is leaking more. Hawthorn's last-5 average is 83.8 points for and 83.6 points against, while their last-3 average is 88.3 points for and 70.0 points against. Their attack is stable, while their defence is tightening. Gold Coast's scoring profile gives them an advantage due to their strong home record and stable attack.

HOME GROUND ADVANTAGE:

Gold Coast has a 6/7 win rate at home this season, while Hawthorn has a 3/6 away record. At Carrara, Gold Coast has a 4/1 win rate over the last 5 games, with an average margin of +22.6 points. Hawthorn has a 0/2 record at Carrara over the last 2 games, with an average margin of -60.0 points. The estimated point value of home advantage for this match is around 8-10 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a Hawthorn win, with a 56.3% implied probability. The line market implies a Hawthorn win by 3.9 points. The Squiggle model predicts a Hawthorn win by 10.1 points. The market and model disagree with the predicted winner, but the form data and home ground advantage suggest a Gold Coast win. The form data is weighted more heavily due to the recent head-to-head performance and Gold Coast's strong home record.

FATIGUE & TRAVEL IMPACT:

Gold Coast has 7 days rest, while Hawthorn had 14 days rest but travels to Gold Coast. Fatigue is not a significant factor for this match, as both teams have had sufficient rest.

WEATHER IMPACT:

The forecast is for fine conditions, with a maximum temperature of 22°C and no rain. The conditions are neutral and will not significantly affect the result.

TEAM NEWS IMPACT:

No team news is available, so the impact is unknown. However, this is factored into the prediction by weighting the form data and home ground advantage more heavily.

CONFIDENCE: Medium

The confidence is medium due to the conflicting signals from the market and model, but the form data and home ground advantage suggest a Gold Coast win.

UPSET RISK: Medium

The upset risk is medium due to Hawthorn's strong away record and the Squiggle model's prediction of a Hawthorn win. However, Gold Coast's home ground advantage and recent head-to-head performance suggest a possible upset.

DATA CONFLICTS:

The head-to-head market and Squiggle model contradict the predicted winner, with the market and model implying a Hawthorn win. Additionally, the last-3 averages for both teams contradict their last-5 averages, with Gold Coast's defence leaking more and Hawthorn's defence tightening.

Round 15 | Adelaide Oval | 2026-06-20

Adelaide vs Melbourne

MEDIUM CONFIDENCE

TIP: Adelaide

58% win probability approx. 12pt margin

Adelaide \$1.34 (74.7% implied) | Melbourne \$3.27 (30.5% implied) | Line: Adelaide Crows giving 20.4 pts

PREDICTED WINNER: Adelaide

WIN PROBABILITY: Adelaide: 58% | Melbourne: 42%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probabilities adjusted to remove the bookmaker's overround.

PREDICTED MARGIN: ~12 points

The predicted margin is anchored to the line market (Adelaide giving 20.4 points) and adjusted based on the average scoring margins of both teams, with Adelaide's average margin over the last 5 games being +30.8 points and Melbourne's being +8.0 points.

KEY FACTORS:

- 1. Adelaide's significant home ground advantage, with a 71% win rate at home this season and a 24pp higher win rate at home historically.
- 2. Melbourne's relatively poor record at Adelaide Oval, with a 1-4 record over the last 5 games and an average margin of -21.4 points.
- 3. Adelaide's strong recent form, with 4 wins in their last 5 games and an average score of 98.6 points for and 67.8 points against.
- 4. The potential return of key players for Adelaide, as mentioned in the team news, which could further strengthen their lineup.

SCORING TRENDS ANALYSIS:

Adelaide's last-5 average is 98.6 points for and 67.8 points against, while their last-3 average is 87.3 points for and 71.0 points against.

Their attack is trending down, while their defence is stable. Melbourne's last-5 average is 91.6 points for and 83.6 points against, while their last-3 average is 82.7 points for and 81.3 points against. Their attack is also trending down, while their defence is stable. Adelaide's scoring profile gives them an advantage due to their stronger defence and higher average score.

HOME GROUND ADVANTAGE:

Adelaide has a 71% win rate at home this season, while Melbourne has a 43% win rate away from home. At Adelaide Oval, Adelaide has a 59% historical win rate and an average margin of +13.1 points, while Melbourne has a 52% win rate and an average margin of +6.6 points. The estimated point value of home advantage for this match is around 10-12 points.

MARKET & MODEL ANALYSIS:

The h2h market implies a 74.7% chance of Adelaide winning, while the line market implies a 20.4-point margin in favour of Adelaide. The Squiggle model predicts a 7.2-point margin in favour of Adelaide. The market and model generally agree, with the model predicting a slightly closer margin.

FATIGUE & TRAVEL IMPACT:

Adelaide has 9 days of rest, while Melbourne has 7 days of rest. Melbourne also has to travel to Adelaide, which may have a minor impact on their performance. However, fatigue is not a significant factor for this match.

WEATHER IMPACT:

The forecast is for a cool and potentially rainy day, with a 47% chance of rain and a maximum temperature of 14°C. The conditions may favour Adelaide's more defensive style, but the impact is likely to be neutral.

TEAM NEWS IMPACT:

There are reports of key players returning for Adelaide, which could strengthen their lineup. However, the exact team news is not confirmed, and the impact is uncertain.

CONFIDENCE: Medium

The confidence level is medium due to the general agreement between the market and model, but also considering the potential uncertainty around team news and the relatively small sample size of recent form data.

UPSET RISK: Medium

The upset risk is medium due to Melbourne's ability to compete with top teams, as shown by their recent win over Essendon and their narrow loss to Western Bulldogs. Specific data points that support an upset include Melbourne's average score of 91.6 points for over the last 5 games and their ability to push Adelaide to a close margin in their recent head-to-head meetings.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data generally pointing to an Adelaide win.

Round 15 | Sydney Showground | 2026-06-20

GWS Giants vs Carlton

MEDIUM CONFIDENCE

TIP: GWS Giants

65% win probability approx. 15pt margin

GWS Giants \$1.39 (72.1% implied) | Carlton \$2.96 (33.8% implied) | Line: Greater Western Sydney Giants giving 17.2 pts

PREDICTED WINNER: GWS Giants

WIN PROBABILITY: GWS Giants: 65% | Carlton: 35%

The probability is driven by a weighted blend of the betting market (implied 72.1% for GWS Giants), form data (GWS Giants' average margin of +23.2 points in the last 5 games), and the significant home ground advantage (GWS Giants' 69pp higher win rate at home). I gave more weight to the form data and home ground advantage, as the betting market's overround may not accurately reflect the true probabilities.

PREDICTED MARGIN: ~15 points

This margin is anchored to the line market (GWS Giants giving 17.2 points) and scoring margin averages (GWS Giants' average margin of +23.2 points in the last 5 games). The predicted margin is slightly lower than the line market, considering Carlton's stable attack and defence trends.

KEY FACTORS:

- GWS Giants' significant home ground advantage, with a 69pp higher win rate at home (83% vs 14% away).
- GWS Giants' improving attack trend, with an average score of 124.3 points in the last 3 games.
- Carlton's stable attack and defence trends, but with a lower average score (83.0 points in the last 5 games).
- The short travel distance for Carlton (Melbourne to Sydney) may not significantly impact their performance.

SCORING TRENDS ANALYSIS:

GWS Giants: last-5 average 109.4 points, last-3 average 124.3 points; attack trending up, defence stable.
Carlton: last-5 average 83.0 points, last-3 average 84.0 points; attack stable, defence stable.
GWS Giants' scoring profile gives them an advantage due to their higher average scores and improving attack trend.

HOME GROUND ADVANTAGE:

GWS Giants: 83% home win rate, 14% away win rate; 61% historical win rate at Sydney Showground.
Carlton: 50% home win rate, 29% away win rate; 25% historical win rate at Sydney Showground.
The estimated point value of home advantage for this match is around 10-12 points, considering the significant difference in GWS Giants' home and away win rates.

MARKET & MODEL ANALYSIS:

The h2h market implies a 72.1% chance of GWS Giants winning. The line market implies a 17.2-point margin in favor of GWS Giants. Unfortunately, the Squiggle model prediction is not available for this match. I weighted the betting market and form data more heavily, as they provide more relevant information for this match.

FATIGUE & TRAVEL IMPACT:

GWS Giants have 6 days of rest, while Carlton has 13 days of rest. Carlton has a short travel distance from Melbourne to Sydney. Fatigue may be a minor factor for GWS Giants due to their short rest, but it is unlikely to significantly impact their performance.

WEATHER IMPACT:

The forecast is fine, with a 3% chance of rain and a moderate wind. The conditions are neutral and unlikely to favor one team over the other.

TEAM NEWS IMPACT:

There is limited team news available, but it is confirmed that Carlton defender Jacob Weirtering will miss the match due to a calf injury. This may have a minor impact on Carlton's defence.

CONFIDENCE: Medium

The data sources generally agree on GWS Giants' advantage, but the short rest for GWS Giants and the stable trends for Carlton introduce some uncertainty.

UPSET RISK: Medium

Specific data points that support an upset include Carlton's stable attack and defence trends, as well as their ability to win away games (29% away win rate). However, GWS Giants' significant home ground advantage and improving attack trend reduce the likelihood of an upset.

DATA CONFLICTS: None identified.

Round 15 | MCG | 2026-06-20

Collingwood vs Port Adelaide

MEDIUM CONFIDENCE

TIP: Collingwood

58% win probability approx. 8pt margin

Collingwood \$1.49 (67.2% implied) | Port Adelaide \$2.66 (37.6% implied) | Line: Collingwood Magpies giving 11.8 pts

PREDICTED WINNER: Collingwood

WIN PROBABILITY: Collingwood: 58% | Port Adelaide: 42%

The probability is driven by a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probabilities adjusted to remove the overround and the Squiggle model's prediction given more weight due to its recent accuracy.

PREDICTED MARGIN: ~8 points

The predicted margin is anchored to the line market, which implies a margin of 11.8 points, but adjusted downward due to the heavy rain forecast, which tends to reduce the margin and benefit underdogs, and the stable attack and defence trends of both teams.

KEY FACTORS:

- Collingwood's strong head-to-head record against Port Adelaide, with 5 wins in their last 5 meetings, including a 136-45 win at the MCG in 2025.
- Port Adelaide's poor away record, with a 2-6 win-loss record and a 33% win rate, compared to Collingwood's 2-6 home record and 33% win rate.
- The heavy rain forecast, which is likely to reduce the effectiveness of high-marking forwards and benefit the team with a stronger contested game, which is Collingwood.
- The rest days and travel fatigue, with Collingwood having 12 days rest and playing at home, while Port Adelaide has 7 days rest and is traveling from Adelaide.

SCORING TRENDS ANALYSIS:

Collingwood's last-5 average is 80.6 points for and 93.0 points against, while their last-3 average is 86.7 points for and 87.3 points against. Their attack and defence are trending stable. Port Adelaide's last-5 average is 74.0 points for and 85.6 points against, while their last-3 average is 75.0 points for and 85.3 points against. Their attack and defence are also trending stable. Collingwood's scoring profile gives them an advantage due to their higher average score and more consistent performance.

HOME GROUND ADVANTAGE:

Collingwood has a 2-6 home record and a 33% win rate, while Port Adelaide has a 2-7 away record and a 29% win rate. At the MCG, Collingwood has a 389-334 win-loss record and a 54% win rate, while Port Adelaide has a 27-33 win-loss record and a 45% win rate. The home ground advantage is estimated to be around 8-10 points, which is a significant factor in this match.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 67.2% chance of Collingwood winning, while the line market implies a margin of 11.8 points. The Squiggle model predicts a Collingwood win with a margin of 10.0 points. The market and model agree on a Collingwood win, but the model predicts a slightly lower margin. The model's prediction is given more weight due to its recent accuracy.

FATIGUE & TRAVEL IMPACT:

Collingwood has 12 days rest, while Port Adelaide has 7 days rest. Port Adelaide is traveling from Adelaide, which may cause some fatigue. However, the travel distance is relatively short, and the fatigue impact is likely to be minimal.

WEATHER IMPACT:

The forecast is for heavy rain, with a 99% chance of rain and 14.6mm of precipitation. The conditions are likely to favor Collingwood, who has a stronger contested game and is more suited to playing in wet conditions.

TEAM NEWS IMPACT:

There is limited team news available, with only a few articles mentioning injuries and suspensions. However, there is no significant news that is likely to impact the match.

CONFIDENCE: Medium

The data sources generally agree on a Collingwood win, but the margin is uncertain due to the heavy rain forecast and the stable attack and defence trends of both teams.

UPSET RISK: Medium

The upset risk is medium due to the following factors: Port Adelaide's recent win against West Coast, their stable attack and defence trends, and the heavy rain forecast, which may reduce the margin and benefit the underdog.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data all pointing to a Collingwood win.

Round 15 | MCG | 2026-06-21

Richmond vs North Melbourne

MEDIUM CONFIDENCE

TIP: North Melbourne

59% win probability approx. 12pt margin

Richmond \$3.04 (32.9% implied) | North Melbourne \$1.38 (72.3% implied) | Line: North Melbourne Kangaroos giving 18.1 pts

PREDICTED WINNER: North Melbourne

WIN PROBABILITY: Richmond: 41.2% | North Melbourne: 58.8%

The probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the Squiggle model and form data driving the slightly lower probability for North Melbourne compared to the market's implied probability.

PREDICTED MARGIN: ~12 points

The predicted margin is anchored to the line market, which implies a margin of 18.1 points, but adjusted downward based on the average scoring margins of the two teams, with Richmond averaging a -40.8 point margin over the last 5 games and North Melbourne averaging a -38.6 point margin over the same period.

KEY FACTORS:

1. North Melbourne's superior ladder position, with 24 points compared to Richmond's 8 points, indicating a significant difference in team performance.
2. Richmond's poor recent form, with only 1 win in their last 5 games, and an average score of 68.8 points for and 109.6 points against over the same period.
3. North Melbourne's stable attack and defence trends, with an average score of 75.6 points for and 114.2 points against over the last 5 games.
4. The head-to-head record between the two teams, with North Melbourne winning 5 of the last 6 meetings, including a 130-55 win at Docklands in 2026.

SCORING TRENDS ANALYSIS:

Richmond's last-5 average is 68.8 points for and 109.6 points against, with a stable attack and defence trend. Their last-3 average is 70.0 points for and 113.7 points against. North Melbourne's last-5 average is 75.6 points for and 114.2 points against, with a stable attack and defence trend. Their last-3 average is 72.0 points for and 111.0 points against. North Melbourne's scoring profile gives them an advantage due to their slightly higher average score and more consistent defence.

HOME GROUND ADVANTAGE:

Richmond has a 1/6 (17%) home win rate this season, while North Melbourne has a 5/8 (62%) home win rate. At the MCG, Richmond has a 1/5 win rate over the last 5 games, with an average margin of -36.6 points. North Melbourne has a 2/5 win rate at the MCG over the same period, with an average margin of -10.6 points. The estimated point value of home advantage for this match is around 8-10 points, which slightly favours Richmond but is not enough to overcome North Melbourne's overall superiority.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 72.3% chance of North Melbourne winning, while the line market implies a margin of 18.1 points. The Squiggle model predicts a North Melbourne win with an expected margin of 10.3 points. The market and model agree on a North Melbourne win, but the model predicts a slightly lower margin.

FATIGUE & TRAVEL IMPACT:

Richmond has 7 days of rest, while North Melbourne has 8 days of rest. Neither team has significant travel, as both are playing in Melbourne. Fatigue is not a significant factor for this match.

WEATHER IMPACT:

The forecast is for a cool and dry day, with a maximum temperature of 13°C and a 27% chance of rain. The conditions are neutral and do not favour one team over the other.

TEAM NEWS IMPACT:

North Melbourne will be without Paul Curtis, who is suspended for 3 games. This may have a slight impact on their attack, but it is not expected to significantly affect the outcome of the match.

CONFIDENCE: Medium

The data sources generally agree on a North Melbourne win, but the margin predictions vary, which reduces confidence in the exact outcome.

UPSET RISK: Medium

The upset risk is driven by Richmond's occasional ability to pull off an upset, as seen in their win over Essendon in Round 11. Additionally, the head-to-head record between the two teams is not overwhelmingly in North Melbourne's favour, with Richmond winning 1 of the last 6 meetings.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data all pointing to a North Melbourne

win.

Round 15 | Docklands | 2026-06-21

St Kilda vs Western Bulldogs

MEDIUM CONFIDENCE

TIP: St Kilda

52% win probability approx. 4pt margin

St Kilda \$1.84 (54.4% implied) | Western Bulldogs \$1.98 (50.6% implied) | Line: St Kilda Saints giving 1.4 pts

PREDICTED WINNER: St Kilda

WIN PROBABILITY: St Kilda: 52.5% | Western Bulldogs: 47.5%

The probability is driven by a weighted blend of the betting market (45% weight), Squiggle model (30% weight), and form data (25% weight), with the market's implied probabilities adjusted to remove the bookmaker's overround.

PREDICTED MARGIN: ~4 points

The predicted margin is anchored to the line market, which gives St Kilda a 1.4-point advantage, and the scoring margin averages, with St Kilda's average margin over the last 5 games being -8.0 points and Western Bulldogs' average margin being -11.2 points.

KEY FACTORS:

- St Kilda's home ground advantage, with a 50% win rate at home this season and a 55% win rate at Docklands historically, giving them an estimated 8-10 point advantage.
- Western Bulldogs' recent form, with 3 wins in their last 5 games, but an average score of 78.6 points for and 89.8 points against, indicating a potential weakness in their attack.
- St Kilda's scoring trends, with an average score of 89.6 points for and 97.6 points against over the last 5 games, indicating a relatively stable attack and defence.
- The head-to-head record between the two teams, with Western Bulldogs winning 4 of the last 5 meetings, but St Kilda winning 1 of the last 5, indicating a potential upset.

SCORING TRENDS ANALYSIS:

St Kilda's last-5 average is 89.6 points for and 97.6 points against, while their last-3 average is 88.3 points for and 103.7 points against. Their attack and defence are trending stable. Western Bulldogs' last-5 average is 78.6 points for and 89.8 points against, while their last-3 average is 79.3 points for and 95.0 points against. Their attack and defence are also trending stable. St Kilda's scoring profile gives them an advantage due to their higher average score.

HOME GROUND ADVANTAGE:

St Kilda has a 50% win rate at home this season and a 55% win rate at Docklands historically. Western Bulldogs have a 57% win rate at home this season and a 53% win rate at Docklands historically. The estimated point value of home advantage for this match is 8-10 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 54.4% chance of St Kilda winning and a 50.6% chance of Western Bulldogs winning. The line market implies a 1.4-point advantage for St Kilda. The Squiggle model predicts a 1.7-point win for St Kilda. The market and model agree, with the model giving a slightly higher probability to St Kilda.

FATIGUE & TRAVEL IMPACT:

St Kilda has 7 days of rest, while Western Bulldogs have 10 days of rest. Neither team has to travel, as the game is being played at Docklands. Fatigue is not a significant factor for this match.

WEATHER IMPACT:

The game is being played at Marvel Stadium, which has a roof, so weather conditions will not affect play. The conditions are neutral, with no team having an advantage due to their scoring style.

TEAM NEWS IMPACT:

There is limited team news available, with no confirmed ins or outs for either team. The impact of team news is minimal.

CONFIDENCE: Medium

The data sources generally agree, but there is some uncertainty due to the close nature of the game and the contradictory head-to-head record.

UPSET RISK: Medium

The upset risk is supported by Western Bulldogs' recent form and their head-to-head record against St Kilda, with 4 wins in the last 5 meetings.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, model, and form data generally agreeing on the predicted outcome.
