DETAILED MATCH ANALYSIS

Round 17 | Kardinia Park | 2026-07-02

Geelong vs Brisbane Lions

MEDIUM CONFIDENCE

TIP: Geelong

58% win probability approx. 10pt margin

Geelong \$1.46 (68.6% implied) | Brisbane Lions \$2.75 (36.4% implied) | Line: Geelong Cats giving 13.9 pts

PREDICTED WINNER: Geelong

WIN PROBABILITY: Geelong: 58% | Brisbane Lions: 42%

The win probability is derived from a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probabilities adjusted to remove the bookmaker's overround.

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market (13.9 points) and adjusted based on the teams' scoring margin averages, with Geelong's average margin (last 5) of +11.6 points and Brisbane Lions' average margin (last 5) of +1.2 points.

KEY FACTORS:

- Geelong's significant home ground advantage, with a 100% win rate at home this season and a +23pp stronger record at home historically.
- Brisbane Lions' moderate travel fatigue, with only 7 days rest and a 2h30m flight from Brisbane to Geelong.
- Geelong's stable attack and defence trends, with an average score (last 5) of 92.0 pts for and 80.4 pts against.
- The heavy rain forecast, which is likely to reduce scores and benefit the home team, Geelong.

SCORING TRENDS ANALYSIS:

Geelong's last-5 average is 92.0 pts for and 80.4 pts against, with a stable attack and defence trend. Their last-3 average is 89.7 pts for and 78.0 pts against. Brisbane Lions' last-5 average is 102.6 pts for and 101.4 pts against, with an improving attack trend and a tightening defence trend. Their last-3 average is 115.7 pts for and 79.3 pts against. Geelong's scoring profile gives them an advantage due to their stable trends and home ground advantage.

HOME GROUND ADVANTAGE:

Geelong's home win rate is 100% (8/8) and away win rate is 14% (1/7), while Brisbane Lions' home win rate is 57% (4/7) and away win rate is 62% (5/8). Geelong's record at Kardinia Park is 498W-236L (68% win rate), while Brisbane Lions' record at Kardinia Park is 6W-13L (32% win rate). The estimated point value of home advantage for this match is around 15-20 points.

MARKET & MODEL ANALYSIS:

The h2h market implies a 68.6% chance of Geelong winning, while the line market implies a 13.9-point margin in favour of Geelong. The Squiggle model predicts a 9.3-point margin in favour of Geelong. The market and model generally agree, with the model predicting a slightly lower margin.

FATIGUE & TRAVEL IMPACT:

Geelong has 14 days rest, while Brisbane Lions has 7 days rest and moderate travel fatigue. Fatigue is a minor factor for this match, with Brisbane Lions' shorter rest period potentially affecting their performance.

WEATHER IMPACT:

The forecast is for heavy rain, which is likely to reduce scores and benefit the home team, Geelong. The wet conditions may favour Geelong's more contested style of play.

TEAM NEWS IMPACT:

There is limited team news available, with no confirmed ins or outs for either team. The absence of significant team news means that the prediction is based on the teams' current form and trends.

CONFIDENCE: Medium

The data sources generally agree, but the heavy rain forecast and Brisbane Lions' improving attack trend introduce some uncertainty.

UPSET RISK: Medium

Specific data points that support an upset include Brisbane Lions' improving attack trend, their recent wins over Sydney and Richmond, and the potential impact of fatigue on Geelong's performance.

DATA CONFLICTS: None identified

There are no significant contradictions between the data sources, with the market, model, and form data generally agreeing on a Geelong win.

Round 17 | SCG | 2026-07-03

Sydney vs Western Bulldogs

MEDIUM CONFIDENCE

TIP: Sydney

62% win probability approx. 12pt margin

Sydney \$1.41 (71.1% implied) | Western Bulldogs \$2.96 (33.8% implied) | Line: Sydney Swans giving 16.1 pts

PREDICTED WINNER: Sydney

WIN PROBABILITY: Sydney: 62% | Western Bulldogs: 38%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probability of 71.1% for Sydney adjusted downward to account for the overround and Western Bulldogs' recent form.

PREDICTED MARGIN: ~12 points

The predicted margin is anchored to the line market of 16.1 points and adjusted downward based on Sydney's average margin of +9.8 points over the last 5 games and Western Bulldogs' average margin of -4.4 points over the last 5 games.

KEY FACTORS:

- Sydney's significant home ground advantage, with a 100% win rate at home this season and a +15pp stronger record at home historically.
- Western Bulldogs' struggling away form, with a 62% win rate away from home this season, which is 5pp lower than their home win rate.
- Sydney's high-scoring attack, with an average score of 106.0 points over the last 5 games, which could exploit Western Bulldogs' stable but vulnerable defense.
- Western Bulldogs' declining attack trend, with an average score of 82.8 points over the last 5 games, which could struggle against Sydney's defense.

SCORING TRENDS ANALYSIS:

Sydney's last-5 average is 106.0 points for and 96.2 points against, while their last-3 average is 93.3 points for and 106.0 points against. Their attack is trending downward, while their defense is leaking more. Western Bulldogs' last-5 average is 82.8 points for and 87.2 points against, while their last-3 average is 74.7 points for and 84.3 points against. Their attack is trending downward, while their defense is stable. Sydney's scoring profile gives them an advantage due to their higher average score over the last 5 games.

HOME GROUND ADVANTAGE:

Sydney has a 100% win rate at home this season, while Western Bulldogs have a 62% win rate away from home. At the SCG, Sydney has a 60% win rate historically, while Western Bulldogs have a 38% win rate. The estimated point value of home advantage for this match is around 8-10 points, based on the significant difference in win rates.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 71.1% chance of Sydney winning, while the line market implies a 16.1-point margin in favor of Sydney. The Squiggle model predicts a 22.7-point margin in favor of Sydney. The market and model generally agree, with the Squiggle model predicting a slightly larger margin.

FATIGUE & TRAVEL IMPACT:

Sydney has 8 days of rest, while Western Bulldogs have 12 days of rest. Western Bulldogs have a short travel distance from Melbourne to Sydney. Fatigue is not a significant factor for this match, given the adequate rest days for both teams.

WEATHER IMPACT:

The forecast is for a fine day with a maximum temperature of 17°C and no rain. The conditions are neutral and unlikely to favor one team over the other.

TEAM NEWS IMPACT:

Sydney forward Joel Amartey is injured and unlikely to play, which may impact their attack. Western Bulldogs have no significant team news.

CONFIDENCE: Medium

The data sources generally agree, but there is some uncertainty due to Western Bulldogs' recent form and Sydney's declining attack trend.

UPSET RISK: Medium

Specific data points that support an upset include Western Bulldogs' recent wins over St Kilda and Hawthorn, as well as their ability to keep games close against top teams. However, Sydney's significant home ground advantage and higher average score over the last 5 games make an upset less likely.

DATA CONFLICTS: None identified.

Round 17 | Perth Stadium | 2026-07-03

West Coast vs Adelaide

MEDIUM CONFIDENCE

TIP: Adelaide

68% win probability approx. 18pt margin

West Coast \$5.06 (19.8% implied) | Adelaide \$1.18 (85.0% implied) | Line: Adelaide Crows giving 32.1 pts

PREDICTED WINNER: Adelaide

WIN PROBABILITY: West Coast: 32% | Adelaide: 68%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probabilities adjusted to remove the bookmaker's overround. The betting market and Squiggle model both strongly favour Adelaide, while the form data suggests a closer contest but still leans towards Adelaide.

PREDICTED MARGIN: ~18 points

The predicted margin is anchored to the line market, which implies an Adelaide win by 32.1 points, and the scoring margin averages, with West Coast's average margin over the last 5 games being -8.0 points and Adelaide's being +8.0 points. The predicted margin is lower than the line market due to West Coast's significant home ground advantage.

KEY FACTORS:

- 1. Adelaide's strong recent form, with an average score of 82.4 points for and 74.4 points against over the last 5 games, suggests they have a scoring advantage.
- 2. West Coast's poor head-to-head record against Adelaide, with 0 wins and 7 losses in their last 7 meetings, indicates a significant psychological and performance disadvantage.
- 3. The significant home ground advantage for West Coast, with a 31% higher win rate at home, will help to mitigate Adelaide's overall superiority.
- 4. Adelaide's stable attack and defence trends, with an average score of 90.3 points for and 74.3 points against over the last 3 games, suggest they are in good form and well-balanced.

SCORING TRENDS ANALYSIS:

West Coast's last-5 average is 75.0 points for and 83.0 points against, while their last-3 average is 69.3 points for and 89.3 points against. Adelaide's last-5 average is 82.4 points for and 74.4 points against, while their last-3 average is 90.3 points for and 74.3 points against. Both teams' attack and defence are trending stable. Adelaide's scoring profile gives them an advantage due to their higher average score and lower average points against.

HOME GROUND ADVANTAGE:

West Coast has a 43% win rate at home and 12% win rate away, while Adelaide has a 75% win rate at home and 43% win rate away. At Perth Stadium, West Coast has a 45% win rate, while Adelaide has a 38% win rate. The estimated point value of home advantage for this match is around 8-10 points, which is significant but not enough to overcome Adelaide's overall superiority.

MARKET & MODEL ANALYSIS:

The head-to-head market implies an Adelaide win probability of 85.0%, while the line market implies an Adelaide win by 32.1 points. The Squiggle model predicts an Adelaide win by 15.5 points. The market and model agree on an Adelaide win, but the model predicts a closer contest. The market's implied margin is given more weight due to its reflection of the betting public's opinion and the bookmaker's assessment of the teams' relative strengths.

FATIGUE & TRAVEL IMPACT:

Both teams have 6 days of rest, which is a short turnaround and may lead to fatigue. Adelaide has to travel to Perth, which may also impact their performance. However, the fatigue and travel impact are likely to be minimal, given the short rest period and the fact that both teams have had similar rest periods.

WEATHER IMPACT:

The weather forecast is unavailable, so it is unclear whether the conditions will favour one team over the other. However, given the indoor nature of Perth Stadium, the weather is likely to have a minimal impact on the game.

TEAM NEWS IMPACT:

West Coast defender Harry Edwards is out for the season due to concussion issues, which may impact their defensive performance. There is no other significant team news available.

CONFIDENCE: Medium

The confidence level is medium due to the agreement between the market and model on an Adelaide win, but the relatively close predicted margin and the significant home ground advantage for West Coast introduce some uncertainty.

UPSET RISK: Medium

The upset risk is medium due to West Coast's significant home ground advantage and their ability to push Adelaide in recent games. Specific data points that support an upset include West Coast's 31% higher win rate at home and their ability to score an average of 75.0 points per game over the last 5 games.

DATA CONFLICTS: None identified.

Round 17 | York Park | 2026-07-04

Hawthorn vs Melbourne

MEDIUM CONFIDENCE

TIP: Hawthorn

61% win probability approx. 10pt margin

Hawthorn \$1.43 (69.9% implied) | Melbourne \$2.86 (34.9% implied) | Line: Hawthorn Hawks giving 14.2 pts

PREDICTED WINNER: Hawthorn

WIN PROBABILITY: Hawthorn: 61% | Melbourne: 39%

The probability is driven by a weighted blend of the betting market (45% weight, implied probabilities: Hawthorn 69.9% | Melbourne 34.9%), Squiggle model (30% weight, predicted probabilities: Hawthorn 63.3% | Melbourne 36.7%), and form data (25% weight,

considering Hawthorn's recent form and home ground advantage).

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market (Hawthorn giving 14.2 points) and adjusted based on scoring margin averages, considering Hawthorn's average margin of +17.0 points over the last 5 games and Melbourne's average margin of -3.2 points over the same period.

KEY FACTORS:

1. Hawthorn's significant home ground advantage, with a 31pp higher win rate at home (88% vs 57%) and a strong historical record at York Park (76% win rate).
2. Melbourne's recent form, with only 2 wins in their last 5 games, and an average score of 80.0 points for and 83.2 points against over the same period.
3. The impact of Nick Watson's injury on Hawthorn's scoring, as he has kicked a goal in every game in 2026 and is a key player, but his absence may be mitigated by Matt Hill's debut.
4. The Squiggle model's prediction of a 20.6-point margin in favor of Hawthorn, which supports the predicted winner.

SCORING TRENDS ANALYSIS:

Hawthorn's last-5 average is 94.8 points for and 77.8 points against, with a stable attack and defence trend. Their last-3 average is 93.3 points for and 85.3 points against. Melbourne's last-5 average is 80.0 points for and 83.2 points against, with a stable attack and tightening defence trend. Their last-3 average is 80.0 points for and 68.0 points against. Hawthorn's scoring profile gives them an advantage due to their higher average score and stable trends.

HOME GROUND ADVANTAGE:

Hawthorn's home win rate is 88% (7/8), while Melbourne's away win rate is 38% (3/8). Hawthorn has a strong record at York Park (76% win rate), while Melbourne has no current-season venue history. The estimated point value of home advantage for this match is around 10-15 points, considering the significant difference in win rates and Hawthorn's historical dominance at the venue.

MARKET & MODEL ANALYSIS:

The h2h market implies a 69.9% chance of Hawthorn winning, while the line market implies a 14.2-point margin in favor of Hawthorn. The Squiggle model predicts a 20.6-point margin in favor of Hawthorn. The market and model generally agree, with the Squiggle model providing a slightly more optimistic prediction for Hawthorn.

FATIGUE & TRAVEL IMPACT:

Hawthorn has 8 days of rest, while Melbourne has 14 days of rest (including a bye week). Travel fatigue is unknown due to the unmapped venue. Fatigue is not a significant factor for this match, given the relatively equal rest periods.

WEATHER IMPACT:

Weather data is unavailable for York Park. Assuming neutral conditions, neither team is expected to gain a significant advantage based on their scoring style.

TEAM NEWS IMPACT:

Nick Watson is out for Hawthorn due to hamstring tightness, while Matt Hill will make his AFL debut. This may impact Hawthorn's scoring, but the extent of the impact is uncertain.

CONFIDENCE: Medium

The data sources generally agree, but the uncertainty surrounding the venue and travel fatigue, as well as the impact of Nick Watson's injury, contribute to a medium confidence level.

UPSET RISK: Medium

Specific data points that support an upset include Melbourne's recent win over Essendon (95-50) and their stable attack trend, as well as Hawthorn's loss to Western Bulldogs (71-77) and the potential impact of Nick Watson's injury on their scoring.

DATA CONFLICTS: None identified

Round 17 | Manuka Oval | 2026-07-04

GWS Giants vs Fremantle

HIGH CONFIDENCE

TIP: Fremantle

76% win probability approx. 22pt margin

GWS Giants \$3.4 (29.5% implied) | Fremantle \$1.32 (75.5% implied) | Line: Fremantle Dockers giving 20.4 pts

PREDICTED WINNER: Fremantle

WIN PROBABILITY: GWS Giants: 24% | Fremantle: 76%

The probability is driven by a weighted blend of the betting market (60% weight), form data (20% weight), and historical trends (20% weight), with the betting market's implied probability of 75.5% for Fremantle being the primary influence.

PREDICTED MARGIN: ~22 points

The predicted margin is anchored to the line market of 20.4 points and adjusted based on Fremantle's average margin of +47.8 points over the last 5 games, as well as GWS Giants' average margin of +16.4 points over the same period.

KEY FACTORS:

- Fremantle's recent form, with 5 consecutive wins, including a +51 point win over Gold Coast and a +9 point win over Geelong, suggests a strong team performance.
- GWS Giants' declining attack trend, with an average score of 78.3 points for over the last 3 games, may struggle against Fremantle's tightening defence.
- Fremantle's average score of 108.2 points for over the last 5 games indicates a high-scoring offence that could exploit GWS Giants' stable defence.
- The home ground advantage at Manuka Oval, where GWS Giants have a 59% win rate over Fremantle's 50% win rate, may not be sufficient to overcome Fremantle's current form.

SCORING TRENDS ANALYSIS:

GWS Giants' last-5 average is 104.0 points for and 87.6 points against, while their last-3 average is 78.3 points for and 93.3 points against. Their attack is trending down, while their defence is stable. Fremantle's last-5 average is 108.2 points for and 60.4 points against, while their last-3 average is 111.3 points for and 50.0 points against. Their attack is stable, while their defence is tightening. Fremantle's scoring profile gives them an advantage due to their high-scoring offence and strong defence.

HOME GROUND ADVANTAGE:

GWS Giants have a 71% home win rate and a 48% win rate at Manuka Oval, while Fremantle have a 100% home win rate and a 50% win rate at Manuka Oval. The estimated point value of home advantage for this match is around 8-10 points, which may not be sufficient to overcome Fremantle's current form.

MARKET & MODEL ANALYSIS:

The h2h market implies a 75.5% chance of Fremantle winning, while the line market implies a 20.4 point margin in favour of Fremantle. The Squiggle model prediction is not available for this match. The betting market and line market agree on Fremantle's favouritism, and

I have weighted the betting market more heavily due to its consistency with Fremantle's recent form.

FATIGUE & TRAVEL IMPACT:

GWS Giants have 8 days rest, while Fremantle have 6 days rest, which may be a fatigue factor for Fremantle. However, Fremantle's travel from Perth to Canberra may not be a significant factor given their recent form.

WEATHER IMPACT:

The forecast is for fine conditions with a maximum temperature of 11°C and no rain. The weather conditions are neutral and unlikely to favour one team over the other.

TEAM NEWS IMPACT:

There is limited team news available, with only one relevant article for GWS Giants and no relevant news for Fremantle. The impact of team news is uncertain due to the lack of information.

CONFIDENCE: High

The data sources generally agree on Fremantle's favouritism, with the betting market, form data, and historical trends all supporting a Fremantle win.

UPSET RISK: Low

The upset risk is low due to Fremantle's strong recent form, GWS Giants' declining attack trend, and the relatively small home ground advantage at Manuka Oval.

DATA CONFLICTS: None identified

There are no significant data conflicts identified, with the betting market, form data, and historical trends all generally supporting a Fremantle win.

Round 17 | Carrara | 2026-07-04

Gold Coast vs Collingwood

MEDIUM CONFIDENCE

TIP: Gold Coast

55% win probability approx. 4pt margin

Gold Coast \$1.61 (62.1% implied) | Collingwood \$2.34 (42.7% implied) | Line: Gold Coast Suns giving 8.5 pts

PREDICTED WINNER: Gold Coast

WIN PROBABILITY: Gold Coast: 55% | Collingwood: 45%

The win probability is derived from a weighted blend of the betting market (30%), Squiggle model (40%), and form data (30%), with the Squiggle model's expected margin of 3.1 points and the betting market's implied probability of 62.1% for Gold Coast being the primary drivers.

PREDICTED MARGIN: ~4 points

The predicted margin is anchored to the line market of 8.5 points, but adjusted downward based on Gold Coast's significant home ground advantage and Collingwood's moderate travel, as well as Gold Coast's average margin of +8.2 points at Carrara in their last 5 games.

KEY FACTORS:

1. Gold Coast's home ground advantage, with a 75% win rate at home this season and an average margin of +8.2 points at Carrara in their last 5 games.
2. Collingwood's moderate travel, with a 2h30m flight from Melbourne to Gold Coast, which may impact their performance.
3. Gold Coast's defensive trend, which is stable, while Collingwood's attack trend is stable, but their defence trend is tightening, which may limit their scoring.
4. The head-to-head record, with Gold Coast winning 2 of the last 5 meetings, including the last meeting at Carrara, which may give them an edge in terms of familiarity and confidence.

SCORING TRENDS ANALYSIS:

Gold Coast's last-5 average is 73.2 points for and 103.0 points against, while their last-3 average is 62.0 points for and 99.3 points against. Their attack is trending down, while their defence is stable. Collingwood's last-5 average is 88.8 points for and 77.0 points against, while their last-3 average is 86.3 points for and 68.7 points against. Their attack is stable, while their defence is tightening. Gold Coast's scoring profile is at a disadvantage due to their declining attack, but their home ground advantage may help to mitigate this.

HOME GROUND ADVANTAGE:

Gold Coast has a 75% win rate at home this season, while Collingwood has a 43% win rate away from home. At Carrara, Gold Coast has a 43% all-time win rate, while Collingwood has a 73% all-time win rate. However, in their last 5 games at Carrara, Gold Coast has a 3-2 win-loss record, with an average margin of +8.2 points. The estimated point value of home advantage for this match is around 10-12 points, based on the AFL's typical home ground advantage of 8-15 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 62.1% chance of Gold Coast winning, while the line market implies a 8.5-point margin in favour of Gold Coast. The Squiggle model predicts a 3.1-point margin in favour of Gold Coast. The market and model agree on Gold Coast being the favourite, but the model predicts a closer margin. I weighted the Squiggle model more heavily due to its more nuanced prediction, which takes into account the teams' recent form and scoring trends.

FATIGUE & TRAVEL IMPACT:

Gold Coast has 6 days of rest, while Collingwood has 7 days of rest. Collingwood also has to travel from Melbourne to Gold Coast, which may impact their performance. Fatigue is a moderate factor for this match, with Gold Coast's shorter rest period potentially affecting their performance.

WEATHER IMPACT:

The forecast is for fine conditions, with a maximum temperature of 20°C and no chance of rain. The weather is unlikely to significantly affect the result, as both teams are accustomed to playing in similar conditions.

TEAM NEWS IMPACT:

There is no relevant team news for Gold Coast, while Collingwood has some injury concerns, including a defender who is in doubt to play. However, the impact of these injuries is unclear, and I did not adjust my prediction based on this information.

CONFIDENCE: Medium

The data sources generally agree on Gold Coast being the favourite, but there is some uncertainty due to Collingwood's recent form and Gold Coast's declining attack.

UPSET RISK: Medium

The upset risk is supported by Collingwood's recent form, with 3 wins in their last 5 games, and their stable attack trend. Additionally, Gold Coast's declining attack trend and moderate fatigue may make them more vulnerable to an upset.

DATA CONFLICTS: None identified

There are no significant data conflicts, as the market, model, and form data all generally agree on Gold Coast being the favourite.

However, the model predicts a closer margin than the market, which may indicate some uncertainty in the prediction.

Round 17 | MCG | 2026-07-04

Richmond vs Carlton

MEDIUM CONFIDENCE

TIP: Carlton 76% win probability approx. 28pt margin

Richmond \$6.1 (16.4% implied) | Carlton \$1.13 (88.5% implied) | Line: Carlton Blues giving 35.8 pts

PREDICTED WINNER: Carlton

WIN PROBABILITY: Richmond: 24% | Carlton: 76%. The betting market's implied probabilities (16.4% for Richmond and 88.5% for Carlton) and the Squiggle model's predictions (27.2% for Richmond and 72.8% for Carlton) drove the probability, with a higher weight given to the betting market due to its consistency with the teams' recent form data.

PREDICTED MARGIN: ~28 points. The line market's expected margin of 35.8 points and the average margin of Carlton's last 5 games (+23.8 points) justify this prediction, considering the scoring trends and home ground advantage.

KEY FACTORS:

- 1. Carlton's recent form, with 5 consecutive wins, including a +53-point win against West Coast, indicates a strong team performance.
- 2. Richmond's average score against in the last 5 games is 104.0 points, which is significantly higher than Carlton's average score against in the same period (67.6 points), suggesting a defensive advantage for Carlton.
- 3. The head-to-head record between the two teams shows Carlton with a 5-2 win rate in the last 7 meetings, indicating a historical advantage.
- 4. The weather forecast of heavy rain is likely to reduce scores and benefit the underdog, but Carlton's stable attack and defense trends suggest they can adapt to the conditions.

SCORING TRENDS ANALYSIS: Richmond's last-5 average is 66.0 points for and 104.0 points against, with stable attack and defense trends. Carlton's last-5 average is 91.4 points for and 67.6 points against, also with stable trends. Carlton's scoring profile gives them an advantage due to their higher average score and stronger defense.

HOME GROUND ADVANTAGE: Richmond has a 1/7 (14%) home win rate this season, while Carlton has a 4/7 (57%) home win rate. At the MCG, Richmond has a 1W-4L record in the last 5 games, while Carlton has a 3W-2L record. The estimated point value of home advantage for this match is around 8-10 points, but given the teams' current form, it may be less significant.

MARKET & MODEL ANALYSIS: The head-to-head market implies a strong chance of Carlton winning, while the line market suggests a 35.8-point margin in favor of Carlton. The Squiggle model predicts a 37.2-point margin in favor of Carlton. These sources agree, indicating a high confidence in Carlton's chances.

FATIGUE & TRAVEL IMPACT: Both teams have 7 days of rest, and neither team has significant travel fatigue, as they are both playing at the MCG in Melbourne.

WEATHER IMPACT: The forecast of heavy rain and 17 km/h wind is likely to reduce scores and favor more contested play, which may benefit Richmond. However, Carlton's stable trends and stronger defense suggest they can adapt to the conditions.

TEAM NEWS IMPACT: There is limited team news available, with no significant ins or outs reported for either team.

CONFIDENCE: Medium. The data sources generally agree on Carlton's favoritism, but the weather forecast and potential for an upset introduce some uncertainty.

UPSET RISK: Medium. Specific data points that support an upset include Richmond's recent win against Essendon and their historical home record at the MCG, as well as the potential impact of the heavy rain on the game.

DATA CONFLICTS: None identified. The data sources generally support Carlton's favoritism, with no significant contradictions.

Round 17 | Docklands | 2026-07-05

Essendon vs St Kilda

MEDIUM CONFIDENCE

TIP: St Kilda

76% win probability approx. 25pt margin

Essendon \$4.6 (21.8% implied) | St Kilda \$1.2 (83.6% implied) | Line: St Kilda Saints giving 29.5 pts

PREDICTED WINNER: St Kilda

WIN PROBABILITY: Essendon: 24% | St Kilda: 76%

The probability is driven by a weighted blend of the betting market (60% weight), Squiggles model (20% weight), and form data (20% weight), with the market's implied probability of 83.6% for St Kilda and the Squiggles model's predicted win probability of 69.1% for St Kilda being the primary drivers.

PREDICTED MARGIN: ~25 points

The predicted margin is anchored to the line market of 29.5 points and the average margin of St Kilda's last 5 games (-19.6 points), with consideration given to Essendon's average margin of -22.4 points over their last 5 games.

KEY FACTORS:

- 1. St Kilda's higher average score over the last 5 games (80.0 points) compared to Essendon (58.6 points) suggests a significant scoring advantage.
- 2. Essendon's poor recent form, with 0 wins in their last 5 games, indicates a struggling team.
- 3. The head-to-head record between the two teams shows St Kilda with a slight advantage, having won 3 of the last 5 meetings.
- 4. St Kilda's stable attack and defence trends, as well as their higher average score over the last 3 games (86.3 points), suggest a consistent team.

SCORING TRENDS ANALYSIS:

Essendon's last-5 average is 58.6 points for and 81.0 points against, while their last-3 average is 60.7 points for and 82.0 points against, with both their attack and defence trending as stable. St Kilda's last-5 average is 80.0 points for and 99.6 points against, while their last-3 average is 86.3 points for and 91.7 points against, with both their attack and defence also trending as stable. St Kilda's scoring profile gives them an advantage due to their higher average score.

HOME GROUND ADVANTAGE:

Essendon has a 1/7 (14%) home win rate this season, while St Kilda has a 3/7 (43%) home win rate. At Docklands, Essendon has a 0W-5L record in their last 5 games, while St Kilda has a 3W-2L record. The estimated point value of home advantage for this match is

around 8-10 points, given the historical data and the fact that both teams are familiar with the venue.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a strong chance of St Kilda winning, with an implied probability of 83.6%. The line market implies a margin of 29.5 points in favour of St Kilda. The Squiggle model predicts a margin of 30.4 points in favour of St Kilda. These sources agree, with the market and model both suggesting a significant St Kilda win.

FATIGUE & TRAVEL IMPACT:

Essendon has 7 days of rest, while St Kilda has 14 days of rest after a bye week. Neither team has significant travel, as the game is being played at Docklands. Fatigue is not a significant factor in this match, given the rest days and the fact that St Kilda had a bye week.

WEATHER IMPACT:

The weather forecast is neutral, as the game is being played at Marvel Stadium, which has a roof. Therefore, the weather conditions will not affect the game.

TEAM NEWS IMPACT:

There is no relevant team news available for either Essendon or St Kilda, with no confirmed ins or outs.

CONFIDENCE: Medium

The data sources generally agree on a St Kilda win, but the margin and win probability are not unanimous, leading to a medium confidence level.

UPSET RISK: Low

The data points that support a low upset risk include Essendon's poor recent form, St Kilda's higher average score, and the head-to-head record between the two teams.

DATA CONFLICTS: None identified

There are no significant data conflicts identified in the analysis, with the market, model, and form data all suggesting a St Kilda win.

Round 17 | Adelaide Oval | 2026-07-05

Port Adelaide vs North Melbourne

MEDIUM CONFIDENCE

TIP: Port Adelaide 58% win probability approx. 10pt margin

Port Adelaide \$1.4 (71.4% implied) | North Melbourne \$2.98 (33.6% implied) | Line: Port Adelaide Power giving 17.1 pts

PREDICTED WINNER: Port Adelaide

WIN PROBABILITY: Port Adelaide: 58% | North Melbourne: 42%

The probability is driven by a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probability of 71.4% for Port Adelaide being adjusted downward due to North Melbourne's recent form and the home ground advantage.

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market, which gives Port Adelaide a 17.1-point advantage, and adjusted downward based

on North Melbourne's recent scoring averages and the home ground advantage.

KEY FACTORS:

- 1. Port Adelaide's home ground advantage, with a 61% win rate at Adelaide Oval and an average margin of +13.0 points over 160 games.
- 2. North Melbourne's poor record at Adelaide Oval, with a 0-5 record and an average margin of -41.6 points over their last 5 games.
- 3. Port Adelaide's stable attack and defence trends, with an average score of 74.6 points for and 81.0 points against over their last 5 games.
- 4. North Melbourne's tightening defence trend, with an average score of 62.0 points against over their last 3 games.

SCORING TRENDS ANALYSIS:

Port Adelaide's last-5 average is 74.6 points for and 81.0 points against, with a stable attack and defence trend. Their last-3 average is 79.3 points for and 80.7 points against. North Melbourne's last-5 average is 73.6 points for and 89.2 points against, with a stable attack trend and a tightening defence trend. Their last-3 average is 75.3 points for and 62.0 points against. Port Adelaide's scoring profile gives them a slight advantage due to their stable trends and home ground advantage.

HOME GROUND ADVANTAGE:

Port Adelaide has a 38% win rate at home and a 29% win rate away, while North Melbourne has a 67% win rate at home and a 33% win rate away. At Adelaide Oval, Port Adelaide has a 61% win rate and an average margin of +13.0 points, while North Melbourne has a 0-5 record and an average margin of -41.6 points. The estimated point value of home advantage for this match is around 10-15 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 71.4% chance of Port Adelaide winning, while the line market implies a 17.1-point advantage for Port Adelaide. The Squiggle model predicts a 19.7-point win for Port Adelaide. The market and model generally agree, with the Squiggle model being slightly more bullish on Port Adelaide's chances.

FATIGUE & TRAVEL IMPACT:

Port Adelaide has 8 days of rest, while North Melbourne has 7 days of rest. North Melbourne has a short travel distance from Melbourne to Adelaide, which is unlikely to have a significant impact on their performance. Fatigue is not a significant factor for this match.

WEATHER IMPACT:

The forecast is for fine conditions with a maximum temperature of 14°C and no chance of rain. The weather is unlikely to have a significant impact on the match, with both teams able to play their usual style.

TEAM NEWS IMPACT:

Tristan Xerri is expected to return for North Melbourne after recovering from a jaw injury. Paul Curtis is suspended for North Melbourne. There are no significant ins or outs for Port Adelaide.

CONFIDENCE: Medium

The data sources generally agree on Port Adelaide's advantage, but the recent form of both teams and the head-to-head market imply some uncertainty.

UPSET RISK: Medium

North Melbourne's recent form and tightening defence trend, combined with Port Adelaide's inconsistent scoring, suggest that an upset is possible. Specific data points that support an upset include North Melbourne's 4-1 record over their last 5 games and their average score of 75.3 points for over their last 3 games.

DATA CONFLICTS: None identified.
