DETAILED MATCH ANALYSIS

Round 9 | Perth Stadium | 2026-05-07

Fremantle vs Hawthorn

MEDIUM CONFIDENCE

TIP: Fremantle 55% win probability approx. 4pt margin

Fremantle \$1.7 (58.9% implied) | Hawthorn \$2.17 (46.0% implied) | Line: Fremantle Dockers giving 5.6 pts

PREDICTED WINNER: Fremantle

WIN PROBABILITY: Fremantle: 55% | Hawthorn: 45%

The probability is driven by a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probabilities adjusted to remove the bookmaker's overround.

PREDICTED MARGIN: ~4 points

The predicted margin is anchored to the line market, which gives Fremantle a 5.6-point advantage, and the scoring margin averages, with Fremantle's average margin over the last 5 games being +18.0 points and Hawthorn's being +18.6 points.

KEY FACTORS:

- Fremantle's home ground advantage, with a 100% win rate at home this season and a +23pp stronger record at home historically, is a significant factor.
- Hawthorn's away record, with a 67% win rate, is lower than their home record, which could impact their performance.
- Fremantle's attack trend is improving, with an average score of 104.7 points over the last 3 games, while Hawthorn's attack trend is stable.
- The head-to-head record between the two teams, with Fremantle winning 4 out of the last 5 meetings, could also influence the

outcome.

SCORING TRENDS ANALYSIS:

Fremantle's last-5 average is 87.4 points for and 69.4 points against, while their last-3 average is 104.7 points for and 77.3 points against. Their attack is trending up, while their defence is stable. Hawthorn's last-5 average is 98.0 points for and 79.4 points against, while their last-3 average is 98.0 points for and 80.7 points against. Their attack and defence are both stable. Fremantle's improving attack gives them an advantage.

HOME GROUND ADVANTAGE:

Fremantle has a 100% win rate at home this season, while Hawthorn has a 67% win rate away. At Perth Stadium, Fremantle has a 60% win rate historically, while Hawthorn has a 40% win rate. The estimated point value of home advantage for this match is around 8-10 points, given Fremantle's strong home record and Hawthorn's relatively weaker away record.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 58.9% chance of Fremantle winning, while the line market implies a 5.6-point advantage for Fremantle. The Squiggle model predicts a 4.0-point win for Hawthorn, which disagrees with the market. I weighted the market more heavily due to its implied probabilities being closer to the historical head-to-head record between the two teams.

FATIGUE & TRAVEL IMPACT:

Fremantle has 6 days of rest, while Hawthorn has 7 days of rest. Hawthorn has to travel from Melbourne to Perth, which could be a factor. However, given the relatively short turnaround for both teams, fatigue is not a significant factor for this match.

WEATHER IMPACT:

The weather forecast is unavailable, so it is unclear whether conditions will favour one team over the other.

TEAM NEWS IMPACT:

There is no relevant team news available for either Fremantle or Hawthorn, so there is no impact from team news.

CONFIDENCE: Medium

The confidence level is medium because while the data sources generally agree on Fremantle's advantage, the Squiggle model's prediction of a Hawthorn win introduces some uncertainty.

UPSET RISK: Medium

The upset risk is medium due to Hawthorn's stable attack and defence trends, as well as their relatively strong away record. Specifically, Hawthorn's average margin over the last 5 games is +18.6 points, which is similar to Fremantle's average margin, and their away record is 67%, which is still a respectable win rate.

DATA CONFLICTS:

One data conflict is the Squiggle model's prediction of a Hawthorn win, which disagrees with the head-to-head market and Fremantle's strong home record. Another data conflict is the difference between Fremantle's improving attack trend and Hawthorn's stable attack trend, which could impact the outcome of the match.

Round 9 | Gabba | 2026-05-08

Brisbane Lions vs Carlton

MEDIUM CONFIDENCE

TIP: Brisbane Lions

73% win probability approx. 38pt margin

Brisbane Lions \$1.08 (92.4% implied) | Carlton \$8.09 (12.4% implied) | Line: Brisbane Lions giving 44.6 pts

PREDICTED WINNER: Brisbane Lions

WIN PROBABILITY: Brisbane Lions: 73% | Carlton: 27%

The win probability is driven by a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probability of 92.4% for Brisbane Lions being adjusted downward to account for the bookmaker's overround and the Squiggle model's predicted margin of 34.9 points.

PREDICTED MARGIN: ~38 points

The predicted margin is anchored to the line market's expected margin of 44.6 points and the average margin of Brisbane Lions' last 5 games, which is +38.8 points, suggesting that Brisbane Lions are likely to win by a similar margin.

KEY FACTORS:

- Brisbane Lions' strong recent form, with 4 wins in their last 5 games, and an average margin of +38.8 points, indicating a high level of performance.
- Carlton's poor recent form, with 0 wins in their last 5 games, and an average margin of -19.2 points, indicating a low level of performance.
- Brisbane Lions' strong home ground advantage, with a 61% win rate at the Gabba, and an average margin of +12.0 points, suggesting that they are well-suited to playing at home.
- The significant difference in scoring averages between the two teams, with Brisbane Lions averaging 116.6 points per game and Carlton averaging 82.6 points per game, indicating a significant gap in scoring ability.

SCORING TRENDS ANALYSIS:

Brisbane Lions' last-5 average is 116.6 points per game, and their last-3 average is 124.0 points per game, with their attack trending stable and their defence trending downward. Carlton's last-5 average is 82.6 points per game, and their last-3 average is 80.3 points per game, with their attack and defence both trending stable. Brisbane Lions' scoring profile gives them an advantage due to their high scoring average and stable attack.

HOME GROUND ADVANTAGE:

Brisbane Lions have a 67% win rate at home and a 60% win rate away, while Carlton have a 25% win rate away and a 0% win rate at the Gabba this season. Brisbane Lions have a strong record at the Gabba, with a 61% win rate and an average margin of +12.0 points. The point value of home advantage for this match is estimated to be around 10-15 points, given the significant difference in win rates and margins between the two teams at the Gabba.

MARKET & MODEL ANALYSIS:

The h2h market implies that Brisbane Lions have a 92.4% chance of winning, while the line market implies that Brisbane Lions will win by 44.6 points. The Squiggle model predicts that Brisbane Lions will win by 34.9 points. The market and model agree that Brisbane Lions will win, but the market predicts a larger margin. The Squiggle model is weighted more heavily due to its ability to account for team performance and margin.

FATIGUE & TRAVEL IMPACT:

Both teams have 6 days of rest, which is a short turnaround, and Carlton has moderate travel from Melbourne to Brisbane. Fatigue is a potential factor for both teams, but it is not expected to have a significant impact on the match.

WEATHER IMPACT:

The forecast is for fine conditions, with a maximum temperature of 20°C and no rain. The weather is not expected to have a significant impact on the match, as both teams are accustomed to playing in similar conditions.

TEAM NEWS IMPACT:

There is no team news available for either team, which means that the predicted outcome is based solely on form and statistical data.

CONFIDENCE: Medium

The confidence in the prediction is medium, as the data sources generally agree that Brisbane Lions will win, but there is some uncertainty due to the short turnaround and travel for both teams.

UPSET RISK: Low

The upset risk is low, as Carlton have not shown any recent form that suggests they can beat Brisbane Lions, and the statistical data indicates a significant gap between the two teams.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, as the market, model, and form data all suggest that Brisbane Lions will win.

Round 9 | Adelaide Oval | 2026-05-08

Port Adelaide vs Western Bulldogs

MEDIUM CONFIDENCE

TIP: Port Adelaide

55% win probability approx. 4pt margin

Port Adelaide \$1.86 (53.7% implied) | Western Bulldogs \$1.95 (51.2% implied) | Line: Port Adelaide Power giving 1.5 pts

PREDICTED WINNER: Port Adelaide

WIN PROBABILITY: Port Adelaide: 55% | Western Bulldogs: 45%

The probability is driven by a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probabilities adjusted to remove the bookmaker's overround.

PREDICTED MARGIN: ~4 points

The predicted margin is anchored to the line market, which gives Port Adelaide a 1.5-point advantage, and the average scoring margin of Port Adelaide (+10.8 points) and Western Bulldogs (-31.8 points) over the last 5 games.

KEY FACTORS:

- Port Adelaide's home ground advantage, with a 62% win rate at Adelaide Oval and an average margin of +13.4 points, compared to Western Bulldogs' 33% win rate and -15.4 points average margin at the same venue.
- Western Bulldogs' recent form, with only 1 win in their last 5 games, and an average score of 76.2 points for and 108.0 points against, indicating a struggling attack and defence.
- Port Adelaide's stable attack and defence trends, with an average score of 82.6 points for and 71.8 points against over the last 5 games.
- The head-to-head record between the two teams, with Port Adelaide winning 4 of the last 5 meetings, including a 102-54 win at Adelaide Oval in 2024.

SCORING TRENDS ANALYSIS:

Port Adelaide's last-5 average is 82.6 points for and 71.8 points against, while their last-3 average is 85.3 points for and 76.7 points against. Their attack and defence are trending stable. Western Bulldogs' last-5 average is 76.2 points for and 108.0 points against, while their last-3 average is 72.7 points for and 123.7 points against. Their attack is stable, but their defence is leaking more. Port

Adelaide's scoring profile gives them an advantage due to their stable attack and defence.

HOME GROUND ADVANTAGE:

Port Adelaide has a 50% win rate at home and 25% away, while Western Bulldogs have a 50% win rate at home and 50% away. At Adelaide Oval, Port Adelaide has a 62% win rate and Western Bulldogs have a 33% win rate. The estimated point value of home advantage for this match is around 8-10 points, based on the historical data.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a close game, with Port Adelaide at \$1.86 and Western Bulldogs at \$1.95. The line market gives Port Adelaide a 1.5-point advantage. The Squiggle model predicts a Port Adelaide win with a margin of 3.1 points. The market and model agree on a Port Adelaide win, but the margin is uncertain.

FATIGUE & TRAVEL IMPACT:

Both teams have 7 days of rest, and Western Bulldogs have a short travel from Melbourne to Adelaide. Fatigue is not a significant factor for this match.

WEATHER IMPACT:

The forecast is for a fine day with a maximum temperature of 16°C and a 10% chance of rain. The conditions are neutral and will not significantly affect the result.

TEAM NEWS IMPACT:

Western Bulldogs' captain Marcus Bontempelli is expected to play despite carrying a knee injury and a bruised heel. There is no other significant team news.

CONFIDENCE: Medium

The data sources generally agree on a Port Adelaide win, but the margin is uncertain due to Western Bulldogs' inconsistent form.

UPSET RISK: Medium

The upset risk is supported by Western Bulldogs' recent win over Essendon and their ability to score high points, as seen in their last game against Fremantle. Additionally, Port Adelaide's loss to Adelaide in the previous round shows that they are not invincible.

DATA CONFLICTS: None identified.

Round 9 | Docklands | 2026-05-09

North Melbourne vs Sydney

MEDIUM CONFIDENCE

TIP: Sydney

68% win probability approx. 20pt margin

North Melbourne \$3.56 (28.1% implied) | Sydney \$1.3 (77.1% implied) | Line: Sydney Swans giving 23.1 pts

PREDICTED WINNER: Sydney

WIN PROBABILITY: North Melbourne: 31.5% | Sydney: 68.5%

The probability is driven by a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market's implied probability of 77.1% for Sydney being adjusted downward to account for North Melbourne's home ground advantage and recent scoring trends.

PREDICTED MARGIN: ~20 points

The predicted margin is anchored to the line market's expected margin of 23.1 points, but adjusted downward to reflect North Melbourne's average margin of +0.6 points over their last 5 games and Sydney's average margin of +56.8 points over their last 5 games, which suggests that Sydney's dominance may be slightly overstated.

KEY FACTORS:

- Sydney's strong recent form, with 5 consecutive wins and an average score of 125.4 points for and 68.6 points against over their last 5 games.
- North Melbourne's poor head-to-head record against Sydney, with 0 wins and 6 losses over their last 6 meetings, and an average score of 69.5 points for and 107.3 points against.
- The significant home ground advantage for North Melbourne, with a 50pp higher win rate at home, but this may be mitigated by Sydney's strong away record, with a 67% win rate away from home.
- The absence of Sydney's Charlie Curnow and Jai Serong due to injury, which may impact their scoring ability, but Sydney's depth and recent form suggest they can still dominate.

SCORING TRENDS ANALYSIS:

North Melbourne's last-5 average is 95.2 points for and 94.6 points against, with their last-3 average being 104.7 points for and 98.3 points against. Their attack is trending up, while their defence is stable. Sydney's last-5 average is 125.4 points for and 68.6 points against, with their last-3 average being 121.3 points for and 80.0 points against. Their attack is stable, while their defence is leaking more. Sydney's scoring profile gives them an advantage due to their high average score and strong defence.

HOME GROUND ADVANTAGE:

North Melbourne has a 75% win rate at home and a 25% win rate away, while Sydney has a 100% win rate at home and a 67% win rate away. At Docklands, North Melbourne has a 48% win rate and an average margin of -0.6 points, while Sydney has a 60% win rate and an average margin of +11.6 points. The estimated point value of home advantage for this match is around 8-10 points, but this may be mitigated by Sydney's strong away record.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 77.1% chance of Sydney winning, while the line market implies a 23.1-point margin in favour of Sydney. The Squiggle model predicts a 27.9-point margin in favour of Sydney. The market and model generally agree, but the predicted margin is adjusted downward to reflect North Melbourne's home ground advantage and recent scoring trends.

FATIGUE & TRAVEL IMPACT:

North Melbourne has 7 days rest, while Sydney has 6 days rest, which may be a slight disadvantage due to the short turnaround. Sydney also has to travel from Sydney to Melbourne, but this is a short flight and may not have a significant impact. Fatigue is not a major factor for this match.

WEATHER IMPACT:

The weather forecast is neutral, with the match being played at Marvel Stadium, which has a roof. The weather conditions will not affect the play, and neither team is likely to be favoured by the conditions.

TEAM NEWS IMPACT:

Sydney will be without Charlie Curnow and Jai Serong due to injury, which may impact their scoring ability. However, Sydney's depth and recent form suggest they can still dominate. North Melbourne has no significant team news, but the absence of Sydney's key players may give them an opportunity to exploit.

Round 9 | Sydney Showground | 2026-05-09

GWS Giants vs Essendon

HIGH CONFIDENCE

TIP: GWS Giants

85% win probability approx. 38pt margin

GWS Giants \$1.09 (91.7% implied) | Essendon \$7.46 (13.4% implied) | Line: Greater Western Sydney Giants giving 44.9 pts

PREDICTED WINNER: GWS Giants

WIN PROBABILITY: GWS Giants: 85% | Essendon: 15%

The betting market's implied probabilities were adjusted to account for the home ground advantage and recent form, with a weight of 60% given to the market, 20% to the teams' recent scoring trends, and 20% to the head-to-head history. The resulting probabilities reflect the Giants' significant home advantage and the Bombers' struggling recent form.

PREDICTED MARGIN: ~38 points

This margin is anchored to the line market's expected margin of 44.9 points, but adjusted downward to account for the Giants' average margin of -6.2 points over their last 5 games and the Bombers' average margin of -27.8 points over their last 5 games.

KEY FACTORS:

- The Giants have a significant home ground advantage, with a 75% win rate at home this season and a 15-point average margin advantage at Sydney Showground.
- The Bombers have struggled on the road, with a 0% win rate away from home this season and an average margin of -76.5 points at Sydney Showground.
- The Giants' average score over their last 5 games is 83.8 points, while the Bombers' average score is 85.4 points, but the Bombers' defence has been leaking more points, with an average of 113.2 points against over their last 5 games.
- The head-to-head history between the two teams shows the Giants with a 60% win rate over their last 5 meetings, with an average score of 99.8 points to the Bombers' 66.2 points.

SCORING TRENDS ANALYSIS:

The Giants' last-5 average is 83.8 points for and 90.0 points against, while their last-3 average is 78.0 points for and 96.0 points against. Their attack and defence are both trending stable. The Bombers' last-5 average is 85.4 points for and 113.2 points against, while their last-3 average is 83.0 points for and 133.0 points against. Their attack is trending stable, but their defence is leaking more points. The Giants' scoring profile gives them an advantage due to their stronger defence and home ground advantage.

HOME GROUND ADVANTAGE:

The Giants have a 75% win rate at home this season, while the Bombers have a 20% win rate at home. At Sydney Showground, the Giants have a 60% win rate over their history, with an average margin of +6.9 points, while the Bombers have a 40% win rate, with an average margin of -12.0 points. The estimated point value of home advantage for this match is around 15-20 points.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a strong chance of a Giants win, with a 91.7% implied probability. The line market implies a margin of around 44.9 points in favour of the Giants. Unfortunately, the Squiggle model prediction is not available for this match. Given the strong market implications and the teams' recent form, the market's signals are given more weight.

FATIGUE & TRAVEL IMPACT:

The Giants have had 6 days of rest, while the Bombers have had 7 days of rest. The Bombers have had to travel from Melbourne to Sydney, but the short flight is unlikely to have a significant impact. Fatigue is not considered a major factor for this match.

WEATHER IMPACT:

The forecast is for fine conditions, with a maximum temperature of 22°C and no chance of rain. The conditions are neutral and unlikely to favour one team over the other.

TEAM NEWS IMPACT:

There is limited team news available, with only one relevant article mentioning the Giants' John Noble having his charge dismissed and Joe Fonti being unlucky at the AFL Tribunal. The impact of this news is unclear, but it is not expected to have a significant effect on the match.

CONFIDENCE: High

The data sources generally agree on the Giants' strong chance of winning, with the market, head-to-head history, and scoring trends all pointing to a Giants victory.

UPSET RISK: Low

The Bombers' poor recent form, struggling defence, and lack of success at Sydney Showground all contribute to a low upset risk. The only factor that could potentially lead to an upset is the Giants' short rest period, but this is not considered significant enough to outweigh the other factors.

DATA CONFLICTS: None identified

There are no significant conflicts between the data sources, with the market, head-to-head history, and scoring trends all pointing to a Giants victory.

Round 9 | Marrara Oval | 2026-05-09

Gold Coast vs St Kilda

MEDIUM CONFIDENCE

TIP: Gold Coast

58% win probability approx. 8pt margin

Gold Coast \$1.39 (72.1% implied) | St Kilda \$3.05 (32.8% implied) | Line: Gold Coast Suns giving 18.8 pts

PREDICTED WINNER:

Gold Coast

WIN PROBABILITY:

Gold Coast: 58% | St Kilda: 42%

ANALYSIS:

The prediction is based on the data provided, considering factors such as recent form, scoring statistics, head-to-head records, home ground advantage, and team news. Gold Coast has a significant home ground advantage, with a 100% win rate at home this season and an 80% win rate at Marrara Oval historically. Their average margin at Marrara Oval is +24.0 points, which is a substantial advantage. St Kilda, on the other hand, has a better away record than home record this season, but their overall performance is still slightly behind Gold Coast's. The betting market and Squiggle statistical model also favor Gold Coast, with the market expecting a margin of 18.8 points and the Squiggle model predicting a margin of 10.7 points. However, the win probability is not extremely high due to St Kilda's improving attack trend and Gold Coast's recent inconsistent form.

UNCERTAINTY:

There is some uncertainty in the prediction due to the inconsistency in Gold Coast's recent form, with a mix of wins and losses in their last 5 games. Additionally, St Kilda's improving attack trend and their ability to perform well away from home introduce some doubt. The absence of weather data and the potential impact of injuries and suspensions on both teams also contribute to the uncertainty. The

calibration note suggesting that the model is systematically underweighting home ground advantage in close matchups also adds to the uncertainty, as it may be underestimating Gold Coast's chances.

DATA-SUPPORTED REASONS:

The prediction is supported by the following data points:

- Gold Coast's 100% win rate at home this season
- Gold Coast's 80% win rate at Marrara Oval historically
- Gold Coast's average margin of +24.0 points at Marrara Oval
- St Kilda's better away record than home record this season
- The betting market's expected margin of 18.8 points in favor of Gold Coast
- The Squiggle statistical model's predicted margin of 10.7 points in favor of Gold Coast

CONTRADICTING DATA POINTS:

The following data points contradict the prediction:

- St Kilda's improving attack trend
- Gold Coast's recent inconsistent form
- St Kilda's ability to perform well away from home

These contradicting data points contribute to the uncertainty in the prediction and highlight the need for careful consideration of all available information.

Round 9 | MCG | 2026-05-09

Geelong vs Collingwood

MEDIUM CONFIDENCE

TIP: Geelong

59% win probability approx. 10pt margin

Geelong \$1.51 (66.3% implied) | Collingwood \$2.6 (38.5% implied) | Line: Geelong Cats giving 12.9 pts

PREDICTED WINNER: Geelong

WIN PROBABILITY: Geelong: 59% | Collingwood: 41%

The win probability is derived from a weighted blend of the betting market (40%), Squiggle model (30%), and form data (30%), with the market and Squiggle model implying a stronger chance for Geelong, while the form data suggests a closer contest.

PREDICTED MARGIN: ~10 points

The predicted margin is anchored to the line market, which gives Geelong a 12.9-point advantage, and the scoring margin averages, with Geelong's average margin over the last 5 games being +27.8 points and Collingwood's being +4.4 points.

KEY FACTORS:

1. Geelong's strong home ground advantage, with a 100% win rate at home this season, compared to Collingwood's 25% win rate at home.
2. Geelong's average score over the last 5 games is 108.8 points, compared to Collingwood's 84.4 points, indicating a significant scoring difference.
3. Collingwood's improving attack trend, with an average score of 106.0 points over the last 3 games, which could pose a challenge to Geelong's defence.
4. The head-to-head record between the two teams, with Geelong winning 4 out of the last 6 meetings, including the last two at the MCG.

SCORING TRENDS ANALYSIS:

Geelong's last-5 average is 108.8 points, and their last-3 average is 110.3 points, with a stable attack and defence trend. Collingwood's last-5 average is 84.4 points, and their last-3 average is 106.0 points, with an improving attack trend and a stable defence trend. Geelong's scoring profile gives them an advantage due to their higher average score and stable trends.

HOME GROUND ADVANTAGE:

Geelong has a 100% win rate at home and a 55% win rate at the MCG, while Collingwood has a 25% win rate at home and a 54% win rate at the MCG. The estimated point value of home advantage for this match is around 10-15 points, given Geelong's significant home ground advantage.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 66.3% chance of Geelong winning, while the line market implies a 12.9-point advantage for Geelong. The Squiggle model predicts a 12.0-point margin in favour of Geelong. The market and model agree, with the Squiggle model being weighted more heavily due to its data-driven approach.

FATIGUE & TRAVEL IMPACT:

Geelong has 7 days of rest, while Collingwood has 9 days of rest. There is no significant travel fatigue for either team, as Geelong is playing at the MCG, which is not their home ground but is in the same state, and Collingwood is also playing in their home state.

WEATHER IMPACT:

The forecast is for a maximum of 16°C, with a 69% chance of rain and 16 km/h winds. The conditions may favour Geelong's more possession-based game, but the impact is likely to be neutral, as both teams have adapted to playing in various conditions.

TEAM NEWS IMPACT:

There is no relevant team news for Geelong, while Collingwood has some minor news, but it is not expected to have a significant impact on the game.

CONFIDENCE: Medium

The confidence level is medium, as the data sources generally agree, but there are some contradictions, such as Collingwood's improving attack trend, which could pose a challenge to Geelong's defence.

UPSET RISK: Medium

The upset risk is medium, with specific data points supporting an upset, including Collingwood's improving attack trend, their 54% win rate at the MCG, and Geelong's loss to Port Adelaide in round 7, which suggests that Geelong is not invincible.

DATA CONFLICTS:

None identified, as the data sources generally agree, but there are some minor contradictions, such as Collingwood's improving attack trend, which could pose a challenge to Geelong's defence, and Geelong's loss to Port Adelaide, which suggests that Geelong is not invincible.

Round 9 | Docklands | 2026-05-10

Melbourne vs West Coast

MEDIUM CONFIDENCE

TIP: Melbourne

73% win probability approx. 38pt margin

Melbourne \$1.1 (91.0% implied) | West Coast \$7.2 (13.9% implied) | Line: Melbourne Demons giving 42.5 pts

PREDICTED WINNER: Melbourne

WIN PROBABILITY: Melbourne: 73% | West Coast: 27%

The predicted win probability is driven by a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the market's implied probability of 91% for Melbourne being adjusted downward to account for the bookmaker's overround and the Squiggle model's predicted margin of 29.3 points.

PREDICTED MARGIN: ~38 points

The predicted margin is anchored to the line market of 42.5 points and adjusted downward based on Melbourne's average margin of +2.8 points over the last 5 games and West Coast's average margin of -68.4 points over the last 5 games.

KEY FACTORS:

- Melbourne's recent form, with 3 wins in their last 5 games, including a 54-point win over Richmond, suggests they have a strong attacking unit, averaging 104.2 points per game over the last 5 games.
- West Coast's poor defensive record, conceding an average of 124.8 points per game over the last 5 games, makes them vulnerable to Melbourne's attack.
- Melbourne's home ground advantage, with a 100% win rate at home this season, is a significant factor, given their 60pp higher win rate at home compared to away.
- West Coast's long-haul travel from Perth to Melbourne, with only 8 days rest, may exacerbate their fatigue issues and impact their performance.

SCORING TRENDS ANALYSIS:

Melbourne's last-5 average is 104.2 points for and 101.4 points against, while their last-3 average is 114.7 points for and 101.7 points against. Their attack is trending upward, while their defence is stable. West Coast's last-5 average is 56.4 points for and 124.8 points against, while their last-3 average is 57.0 points for and 113.0 points against. Their attack is stable, while their defence is tightening. Melbourne's scoring profile gives them an advantage due to their strong attacking unit and stable defence.

HOME GROUND ADVANTAGE:

Melbourne has a 100% win rate at home this season, while West Coast has a 25% win rate at home and 25% win rate away. At Docklands, Melbourne has a 41% win rate historically, while West Coast has a 37% win rate. The estimated point value of home advantage for this match is around 10-12 points, given Melbourne's significant home ground advantage and West Coast's poor away record.

MARKET & MODEL ANALYSIS:

The head-to-head market implies a 91% chance of Melbourne winning, while the line market implies a 42.5-point margin in favour of Melbourne. The Squiggle model predicts a 29.3-point margin in favour of Melbourne. The market and model agree on Melbourne winning, but the market implies a larger margin. The Squiggle model is weighted more heavily due to its objective analysis of team performance.

FATIGUE & TRAVEL IMPACT:

Melbourne has 7 days rest, while West Coast has 8 days rest but has to travel from Perth to Melbourne. Fatigue is a real factor for this match, with West Coast's long-haul travel potentially exacerbating their fatigue issues.

WEATHER IMPACT:

The weather forecast is neutral, with the game being played at Marvel Stadium, which has a roof. The conditions will not favour one team over the other.

TEAM NEWS IMPACT:

There is no significant team news available for either team, with only a report on Angus Brayshaw's concussion insurance claim being rejected, which does not impact the current team.

CONFIDENCE: Medium

The data sources generally agree on Melbourne winning, but the margin of victory is uncertain due to West Coast's inconsistent form and Melbourne's variable defensive performance.

UPSET RISK: Low

The specific data points that support a low upset risk include Melbourne's strong recent form, West Coast's poor defensive record, and Melbourne's significant home ground advantage.

DATA CONFLICTS: None identified

There are no significant data conflicts between the different sources, with the market, model, and form data all suggesting Melbourne will win.

Round 9 | MCG | 2026-05-10

Richmond vs Adelaide

MEDIUM CONFIDENCE

TIP: Adelaide

68% win probability approx. 24pt margin

Richmond \$5.69 (17.6% implied) | Adelaide \$1.14 (87.5% implied) | Line: Adelaide Crows giving 36.1 pts

PREDICTED WINNER:

Adelaide

WIN PROBABILITY:

Richmond: 32% | Adelaide: 68%

The win probability is derived from a weighted blend of the betting market (40% weight), Squiggle model (30% weight), and form data (30% weight), with the betting market and Squiggle model implying a stronger chance of an Adelaide win, while the form data suggests a slightly more competitive match.

PREDICTED MARGIN:

~24 points

The predicted margin is anchored to the line market of 36.1 points and adjusted based on the average scoring margins of the two teams, with Adelaide's average margin of -4.8 points and Richmond's average margin of -43.2 points over the last 5 games, suggesting a significant advantage for Adelaide.

KEY FACTORS:

- Adelaide's recent form, with 3 wins in their last 5 games, suggests a stronger team performance compared to Richmond's 1 win in their last 5 games.
- Richmond's average score of 69.8 points for and 113.0 points against over the last 5 games indicates a significant defensive vulnerability, which Adelaide can exploit.
- Adelaide's stable attack and defence trends, with an average score of 88.8 points for and 93.6 points against over the last 5 games, suggest a consistent team performance.
- The head-to-head record between the two teams, with Adelaide winning 2 out of the last 4 meetings, suggests a slight advantage for Adelaide in this matchup.

SCORING TRENDS ANALYSIS:

Richmond's last-5 average is 69.8 points for and 113.0 points against, while their last-3 average is 75.3 points for and 114.7 points

against. Adelaide's last-5 average is 88.8 points for and 93.6 points against, while their last-3 average is 84.7 points for and 101.3 points against. Both teams' attack and defence are trending stable. Adelaide's scoring profile gives them an advantage due to their higher average score and lower average points against.

HOME GROUND ADVANTAGE:

Richmond's home win rate this season is 0% (0/3), while their away win rate is 20% (1/5). Adelaide's home win rate is 60% (3/5), while their away win rate is 33% (1/3). At the MCG, Richmond has a historical win rate of 54% (431/803), while Adelaide has a historical win rate of 39% (32/83). The point value of home advantage for this match is estimated to be around 8-10 points, considering the historical data and the current season's performance. However, Richmond's poor home record this season and Adelaide's relatively strong away record suggest that the home ground advantage may be less significant in this match.
